

NSR-S10

NSR-S10 Network Surveillance recorder for up to 4 Full-HD network cameras

The NSR-S10 is a network surveillance recorder for Sony's SD and HD 1080p and 720p network cameras. It records video across a Local Area Network (LAN) for up to four cameras, preserving the quality of captured images, and making them instantly available for detailed investigation.

The set-up process is straightforward, with no need to configure IP addresses or camera parameters. Recording starts as soon as a new camera is automatically detected on the LAN, with images displayed immediately in up to four split-screens.

Sony has a comprehensive range of network surveillance cameras, recorders and servers, with powerful software tools to gather and analyse video evidence.

1-year PrimeSupport is included as standard within the EU, Norway and Switzerland. This gives users access to an expert helpdesk and, in the unlikely event of a failure, will arrange for an advance replacement unit to be delivered within a target time of one working day. An additional 2-years support is also available as an option.

Features

Four channel Network Surveillance Recorder

The NSR-S10 records across a LAN for a maximum of four SD or 1080p/720p networks surveillance cameras.

Stable, high quality Full HD recording

The NSR-S10 records high quality video from the camera, reproducing full HD and SD images. This detailed visual information is available instantly for investigation and evidential purposes.

Selectable Storage Capacity

The NSR-S10 is available with or without internal storage. You can choose a 1TB internal drive, or attach your own hard disk drive. Also available is an external storage option for more than 1TB of storage requirements.

Compatible with a wide range of cameras and encoders

The NSR-S10 can be used with a diverse range of Sony's network cameras and analogue to digital network encoders.

Plug and play

As soon as it detects cameras on a local area network (LAN), the NSR-S10 is ready to record.

Web Client

Using Sony's dedicated web client software, remote access to live video is possible without installation of any other special software.

Three codecs (H.264, MPEG-4 and JPEG)

The NSR-S10 records video using three industry-standard codecs: H.264, MPEG-4 and JPEG, for high quality and maximum compatibility with other equipment.

IR Remote Controller

An infra-red remote controller is supplied with each recorder.

Multiple Language Support

The NSR-S10 supports multiple languages including English, French, Italian, German, Spanish, Russian and simplified Chinese.

Compact Design

The compact size of the NSR-S10 means that it is easy to install, even in tight spaces.
