

MOSIS

Mobile Secure Interaction System

Netzlink's Mobile Security Solution

Mobile fence and site surveillance with MOSIS Security

Netzlink's innovative concept for mobile security solutions offers companies the possibility of optimising their existing security systems decisively.

Simple principle – Simple management

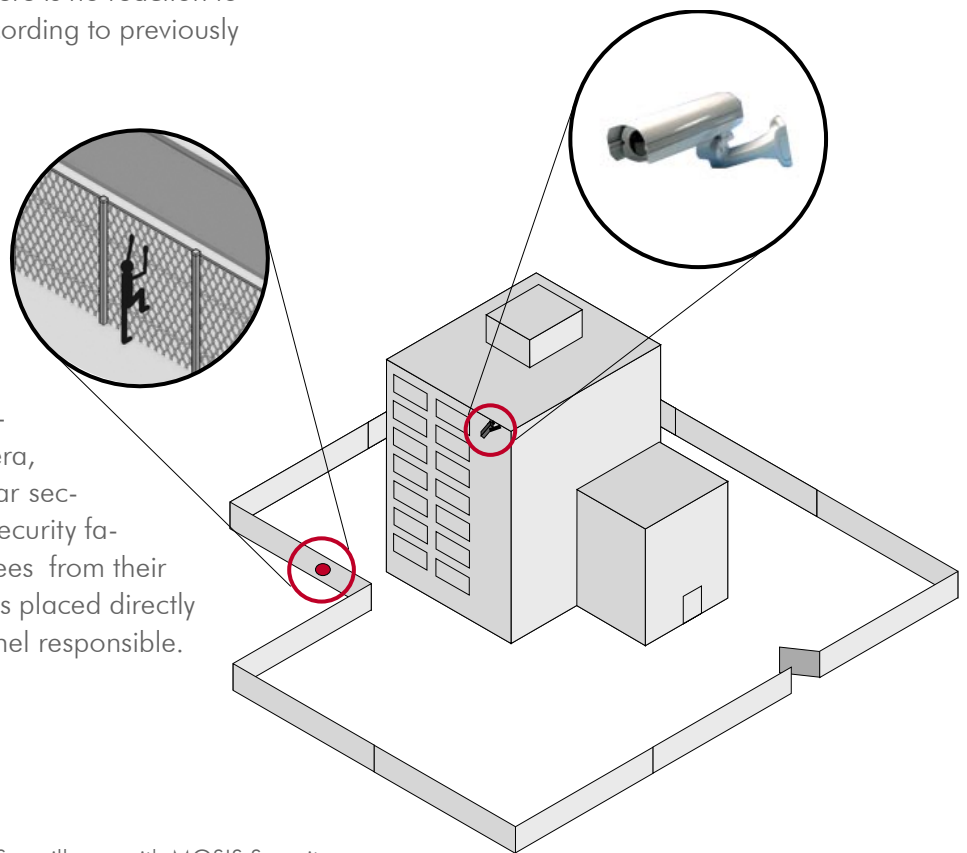

All kinds of alarms can be directly transferred onto a mobile device. A video streaming gives you an immediate impression of the situation. If there is no reaction to the alarm, the system escalates according to previously determined rules.

Enhanced surveillance quality

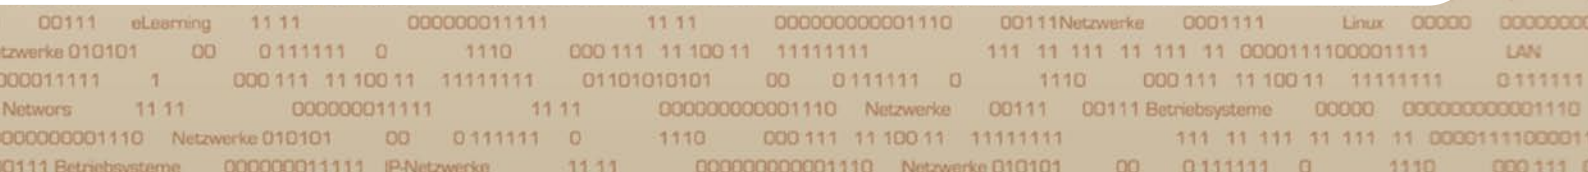

MOSIS Security can be deployed for site and fence surveillance, but also other security systems can be integrated. Part of the concept is the connection of the alarm with event-directed actions: An attack on a fence could, for example, trigger a surveillance camera, which then focuses on the particular section of fence. Cameras and other security facilities can be managed by employees from their mobile devices. The alarm control is placed directly in the hands of the security personnel responsible.

Cost-effective 24-hour surveillance

Watch personnel are not only able to react without delay, but can access all information at any time in any place. MOSIS Security also enables the whole security system to be managed interactively, so that only the personnel responsible have to be informed.

Fence Surveillance with MOSIS Security:
Alarm is triggered on the fence; security camera takes a picture of the attacker

Thus the manpower required for supervising security systems can be kept flexible and efficient. The number of personnel for on-site surveillance can be considerably reduced. The rapid distribution of information effects in a better overview. Internal processes are accelerated and decisions can be made faster and more professionally. Some areas can even do without a constantly staffed control centre.

Transfer through integration

Netzlink works with leading partners from different specialised areas. The advantages of the BlackBerry Enterprise Solution are effectively combined with innovative fence technology by Haverkamp GmbH and intelligent camera technology by Geutebrück GmbH. The integration of security technology with mobile clients opens up a wide range of possibilities for expanding existing security concepts in an effective way. The modular design of the deployed components enables us to produce solutions tailor-made to your needs.

Direct alert to a terminal: The security personnel decide what steps to take next

Your advantages: Faster reaction times • Enhanced surveillance quality • Cost-effective 24 hour surveillance • Reduced personnel expenses • Innovative security technology

Functions: Mobile reception of alarms • Integration of video surveillance, movement sensors, alarm control centres • Permanent surveillance • Detailed registration of alarms on mobile devices in real time • Mobile access to vital information • Automatic control of surveillance cameras • Escalation of alarms according to previously

determined rules • Interactive control from mobile devices • Documentation of processes

Technical Data: Based on IBM WebSphere (J2EE Application Server/Middleware) • Mobile communications infrastructure by T-Mobile, RIM/BlackBerry, Extended Systems, Symbol et al. • Security hardware by our partners Haverkamp GmbH and Geutebrück GmbH (Fence systems, Camera technology, et al.)
