

AL-IR1  
**Infra Red Hand Held Printer**

The battery-powered infrared printer allows your lock event log to be printed onto paper. Because it operates with an invisible infrared beam, no cord is necessary to connect it to the lock. Producing hard copies in the field or in your office could not be easier. And this improved version offers easier-to-read output and automatic shutoff for extended battery life. Operation of the infrared printer is easy too. Simply hold the printer in front of the lock (from up to 10 inches away), and you get a neat, clean copy of your event log. You can print a complete audit trail too, or select and print only what you need from the lock. Just four AA batteries give the infrared AL-IR1 printer go anywhere portability. This printer comes with four AA alkaline batteries, one roll of printer paper.
