

EZ-MultiSite

PC Based Control System

Complete system, supports up to 50/250 sites

The EZ-MultiSite series are complete multi-site access control systems designed for fast and easy installation. Two different types of configuration are possible with EZ-MultiSite: there can be 50 or 250 sites per system. You will be asked to select the maximum number of sites in your system during the installation of the software.

If your access control system consists of 50 or less sites, you can daisy-chain up to four APN-35 controllers to form an 8-reader system per each site. When there are more than 50 and up to 250 sites in the system, the maximum number of APN-35 controllers per site is limited to two, what results in the maximum of 4 readers per site.

All the necessary components (controllers, readers, dial-up modem or network interface, access cards, software, UPS, backup batteries & enclosure) are included in the kit. The installer only needs to provide electrical locking devices and cabling. The programming is done via the easy-to-use ASW-250 software, which resides in the host PC. The software provides cardholder management, configuration, on-line event display and event reports. In addition to standard reports of alarm and access events, the ASW-250 software generates Attendance reports, an important feature to many users, as well as access summary reports.

EZ-MultiSite General features:

- Serial, dial-up or TCP/IP communication from the host computer;
- 10 time zones (2 intervals per time zone) / 8 access levels / 40 holidays per site;
- Non-volatile memory for database storage;
- Card only, card and PIN, card or PIN, facility, locked, unlocked reader modes;
- Reader modes automatically changed by time zones;
- Door contact, reader tamper, enclosure tamper and auxiliary alarm monitoring;
- Anti-passback and soft anti-passback;
- 2 auxiliary outputs controlled by time zones (requires additional relay modules).

EZ-MultiSite (250sites) features:

- Up to 250 sites and up to 1000 doors per system;
- Up to 4 doors per site;
- Up to 500 cards and PINs (keypad required for PIN operation); more than 1500 off-line events per site.

EZ-MultiSite (50sites) features:

- Up to 50 sites and up to 400 doors per system;
- Up to 8 doors per site;
- Up to 2000 cards and PINs (keypad required for PIN operation); up to 3750 off-line events per site.

ASW-250 Software features:

- On-line event display (when host connected to site).
- Selective event reports by door, card, date, time.
- Attendance and access summary reports.

EZ-MultiSite systems are available with **Motorola**, **Keri**, **HID** proximity readers or **Apollo** mag stripe readers with integral keypads.
