

# AR435

**NEW**

## Adaptive Radar Detector

The AR435 detector combines adaptive radar (AR) technology with a passive infrared (PIR) system to increase false alarm immunity by allowing it to sense human-sized objects within a specified range. Both the AR and PIR systems must be triggered to set off an alarm. Can also be used in radar mode only, for stealth operation.

### Applications:

- Extremely Harsh Environments
- Covert Surveillance
- Warehouses
- Loading Bays
- Semi Outdoor Applications
- Pet Immune to 20 lbs.

### Recommended Range:

1 - 12 metres
