

DD470

New 16m dual technology detector

The DD 470 develops further on the good features of the DD 450. With extended 16m range, 9 solid curtains of detection and field selectable coverage patterns. Both the DD 450 and DD 470 use very low microwave power levels ($0.005\mu\text{W}/\text{cm}^2@1\text{m}$). The DD 470 performance is the best in its class and is an ideal choice for all commercial applications where excellent detection combined with false alarm free performance is required.

DD 475 – 16m Vol., NC relay

Applications:

- Very Harsh Environments
- Warehouses
- Loading Bays

Price:

Recommended Range:
5 - 16 metres
