

H4 Thermal Camera with Self-Learning Video Analytics

The outdoor rated Avigilon H4 Thermal camera detects intruders while ignoring foliage and other visible obscurants, such as smoke and dust. It provides exceptional performance with the combination of thermal imaging and Avigilon's patented self-learning video analytics. The bullet-style, multi-environment design is outdoor ready and well suited for a wide range of applications such as perimeter protection for industrial sites and critical infrastructure, transportation and government.

Operating beyond the visible spectrum, the H4 Thermal camera line is designed to detect the movement of people and vehicles even in areas with poor visibility, challenging lighting conditions, absolute darkness and partly camouflaged scenes without the need for additional light sources. Through Avigilon self-learning video analytics, operators receive notification of detected activity that may require further investigation, helping them take decisive action when needed.

The H4 Thermal camera has a resolution of a 320x256 with an uncooled thermal sensor and a durable, vandal resistant, IP66 and IK10 rated housing built for extended life in challenging weather and climate conditions.

SUPPORTED VIDEO ANALYTIC EVENTS

Objects in Area	The event is triggered when the selected object type moves into the region of interest.
Object Loitering	The event is triggered when the selected object type stays within the region of interest for an extended amount of time.
Objects Crossing Beam	The event is triggered when the specified number of objects have crossed the directional beam that is configured over the camera's field of view. The beam can be unidirectional or bidirectional.
Object Appears or Enters Area	The event is triggered by each object that enters the region of interest. This event can be used to count objects.
Object Not Present in Area	The event is triggered when no objects are present in the region of interest
Objects Enter Area	The event is triggered when the specified number of objects have entered the region of interest.
Objects Leave Area	The event is triggered when the specified number of objects have left the region of interest.
