

Avigilon™ Access Control Manager Virtual

Avigilon™ Access Control Manager Virtual is a physical access control system (PACS) that is VMware® Ready for deployment in a virtual server environment, eliminating the need to maintain a separate, stand-alone server or dedicated network appliance. Access Control Manager Virtual is purpose-built for organizations that have migrated their IT infrastructure to a secure, private cloud environment, allowing them to maintain enterprise-grade physical security without the risk of storing sensitive information on a shared server hosted in a public cloud.

INTEGRATED ACCESS CONTROL VIRTUAL APPLIANCE

Avigilon™ Access Control Manager Virtual is a web-based, access control virtual appliance that leverages open architecture, integrates identity management and video surveillance to achieve the highest level of scalability with the lowest cost of ownership.

PHYSICAL AND LOGICAL SECURITY CONVERGENCE

Avigilon™ Access Control Manager Virtual allows organizations to seamlessly integrate IT and physical security systems, such as Identity and Access Governance (IAG), Security Information and Event Management (SIEM), Physical Security Information Management (PSIM) and HR systems to correlate physical and logical security event information, monitor alarms and rapidly respond to unauthorized activities.

BENEFITS

- Video and alarm integration with Avigilon™ Control Center (ACC)
- Eliminate the cost of stand-alone servers and software
- Increase the efficiency and use of computer room resources
- Highly scalable design with decreased deployment time
- Reduce both capital and operational expenditures
