(Remote Monitoring Centre)
Seamless, Powerful, Reliable

Eventys RMC: Seamless, Powerful, Reliable

The EventysTM RMC (Remote Monitoring Centre) is a solution for centralised monitoring and control of several remote surveillance sites. It opens a new era in video surveillance: the evolution of Closed

Circuit television (CCTV) towards Open Circuit Television (OCTV) by breaking the Chains of coax cables and extending the accessibility of the system over networks – no more limitations of time and place ! The versatile feature of the Eventys RMC facilitate new security services and create a dedicated platform for cost-effective centralised video surveillance.

Town and City Centres

Retail & Commercial Buildings

Airports and Mass Transit

Public places & Buildings / Leisure Areas

Chemical and Petrochemical

High Security Buildings

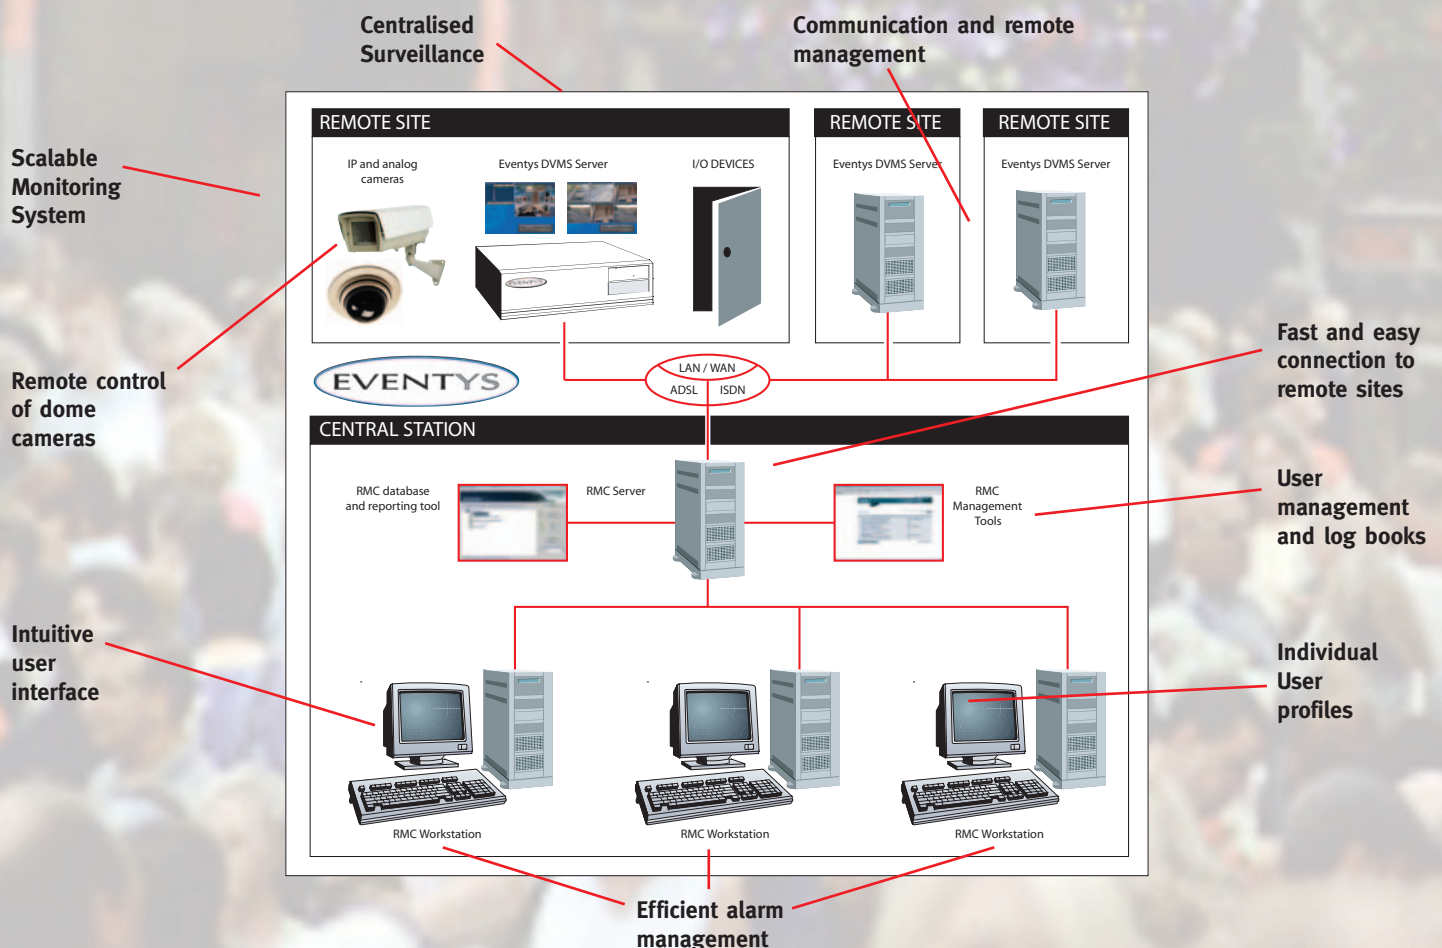

Asset Surveillance

Crime Control

Public Security

Features

- Active connection with up to 100 Eventys DVMS and 1600 video cameras
- Up to eight RMC Workstations per each RMC Server
- Communication over TCP/IP networks (LAN, WAN, ADSL, ISDN)
- Support for WMC9 and JPEG compression
- Intuitive user interface - cameras and other devices are shown on the site Navigator list and as icons on the Site Map
- Real-time camera windows with remote dome camera control and digital zoom
- Programmable remote camera tours
- Retrieval and playback of recorded audio from remote sites
- Advanced search tool with time/date, motion and graphical activity search, alarm list, and audio activity search for

efficient data retrieval Copying of images and sequences on CD/DVD as .avi files

- Remote device control through relay outputs
- Alarm messages from remote sites on the alarm list RMC Workstations with optional pop-up camera windows
- Effective SQL database with a reporting tool
- User management with service profiles; user, operational and error logs; browser-based system management tool
- Language versions: English, Estonian, Finnish, Norwegian, Russian, Spanish and Swedish

Eventys RMC: Seamless, Powerful, Reliable

The Eventys RMC consists of the RMC Server and one or more (up to 8) RMC workstations. The system also includes a database and tools for system and user profile management

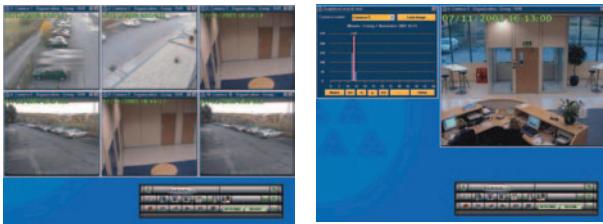

Centralised Surveillance	Eventys RMC allows remote sites to send video images, recorded audio and alarms to a central control room. This enables visual alarm verification and virtual guarding camera tours to be performed remotely.
Scalability	Eventys RMC can support up to 8 parallel workstations, access up to 100 video recorders, and record from up to 1600 cameras.
Communication and remote management	The RMC server controls the data communication between the DVMS and the RMC workstations. It also receives the event messages from the DVMS, stores them in the database, and sends them to the RMC workstations
Intuitive user interface	Following from the Eventys DVMS user interface, the RMC presents a clear and user-friendly interface with familiar keys and functions.
User management and log books	The RMC server manages the list of users and their profiles. When a user logs on at a workstation, the RMC verifies his user name and password, and send the relevant user profile to the workstation. This in turns opens communication links between the workstation and all the remote DVMS to which the user has access to, as defined in the profiles.
Individual user profiles	The user profiles are created and edited in the RMC Profile Manager. A profile defines which DVMS the user can access and receive alarm event messages from, as well as which cameras can be viewed.
Powerful Alarm Management	Each RMC can monitor up to 100 Eventys DVMS. Real-time or recorded video can be viewed, and recorded audio can be played back at the RMC workstations. Each DVMS sends alarm messages back to the RMC where they are stored, and isplayed in the alarm list of the RMC workstation. This generates a camera window automotaically, allowing operators to view the footage, edit the alarm message or change its status. This allows alarms and the whole video system to be managed centrally.
Remote Control of Dome cameras	Dome camears can be controlled directly from the camera windows. A list of preset positions is also available and can be programmed through the Site Navigator. Targeted domes can be zoomed just by clicking on the camera window.

Eventys: Meet the family.

Eventys RMC is part of the Eventys family of powerful Digital Video Management Systems.

Eventys DVMS

More than a digital recorder, Eventys is a security multimedia management system, with fully programmable recording of audio and video channels, from analogue and IP cameras simultaneously.

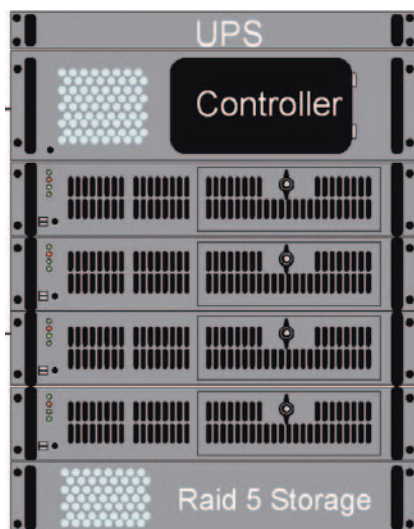

It can organise and prioritise stored media and store and mirror data in different locations. From superior motion detection and intuitive search facilities to powerful system connectivity with an incredible portfolio of networking facilities (watchdog, simultaneous multi-site monitoring, remote building management tools, etc) Eventys is for anyone looking for a simpler, cost-effective way to effective CCTV.

Eventys type R

As powerful as Eventys DVMS, Eventys Type R offers the added functionality to be rack mountable.

MACH-ONE

The heavy weight of the family: with up to 32 video inputs and 32 audio channels, it supports live video from all channels, and offers fast frame rates of up to 800 ips. With 7.2 TB storage capacity, intelligent user interface (up to 8 workstations), support for domes, matrices and keyboard controllers, as well as IP and analogue cameras, Eventys MACH-ONE suits most demanding video and audio security applications.
