MIC Series PSUs, Brackets and Accessories

- ▶ **Full range of PSUs, brackets and accessories. Provides a best-fit solution for virtually any application**
- ▶ **The perfect match. Brackets are available in a range of standard colors**
- ▶ **Easy to use. Designed to seamlessly integrate with the MIC series, all PSUs, brackets and accessories are easy to install**

The range of brackets and accessories have been designed to work seamlessly with the MIC series of fully functional PTZ cameras to offer flexible mounting, power and functionality options.

A full range of Power Supply Units (PSUs) is available to ensure the MIC series can be installed in a variety of locations, including low voltage and mobile applications. The PSU housing also has slots for optional cards, such as the 8-channel alarm card including washer pump drive. Certain PSUs have extra functionality built-in as standard and there are specific variants for IR models.

The unique all-in-one power/video/telemetry cable is available in lengths of 2,10,20 & 25 meters. The cable is required to run from the camera head via a single connector to the PSU. The power/video/telemetry is then split out at the PSU to the relevant control equipment and power source.

A range of brackets are available to facilitate corner, wall and pole mounting. These are available in the standard colors of the MIC series, including stainless steel. Shallow and deep conduit adapters add extra flexibility to mounting options.

Functions

These brackets and accessories are suitable for all MIC series applications.
