

# BioMatch™ 2006

## Access Control

### Security, Accountability & Control

BioMatch 2006 (Sagem Embedded) works seamlessly with BQT's Biometric Terminals to create an advanced access control solution - BioMatch 2006 gives you total control.

Group your users and apply security settings, access rights and time masks to determine who goes where and when. With an extensive range of reporting options included you always know what's going on.

### Why Biometrics?

Biometrics are more secure, they cannot be guessed, stolen, shared or written down. Biometrics are more convenient, they can't be forgotten and are always with you. Biometrics are cheaper, there is no need to provide users with access cards or other expensive tokens, that can easily be lost. With biometrics you can be confident that the right people are getting in.

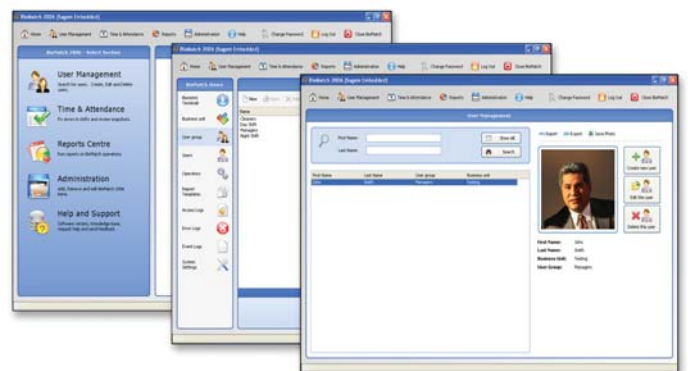

### Time & Attendance Bonus

With BioMatch 2006 not only do you get an advanced access control system you also have access to the powerful Time & Attendance functionality.

### Reliability & Performance with PC Enrolment

The key to a reliable, high performance biometric system is the quality of the enrolment. Seeing the fingerprint being captured allows presentation issues to be fixed immediately for the best enrolment possible. With PC enrolment you can create a profile for each user storing personal photo, contact details and emergency information. Captured photos can also be used for printing ID Cards.

### Centralised Management

Make management simple by centralising control. All your Biometric Terminals, Users, User groups, system configuration, security settings and logs are stored on a central server which can be managed with the easy to use client software

smartersecuritytoday

## BioMatch Hardware

BioMatch hardware has been designed to provide accurate identification at amazing speed for front line of your physical security.

## Access Control Integration

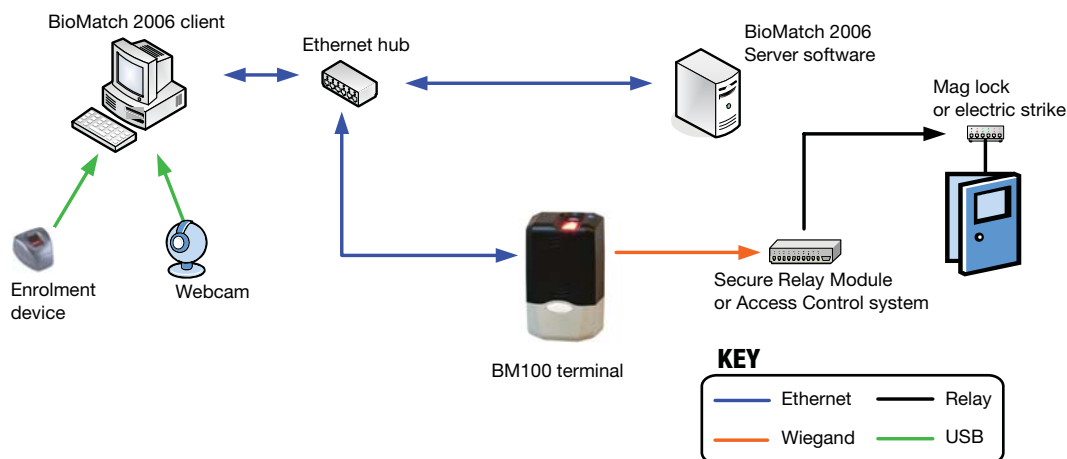

BioMatch hardware uses 26-bit weigand output. Retro-fitting BioMatch 2006 into existing access control systems is simple and easy.

## Simple, Fast and Robust

BioMatch terminals use TCP/IP communication which allows for simple integration into existing corporate networks.

Users will have no trouble as instructions are provided on the screen to help get the best placement of your finger. Identification typically occurs in less than 0.8 of a second giving the benefit of “just present and go”.
