CDV Series

READER TECHNOLOGIES

On-Line Systems - proximity

The CDV on-line systems have the ability to read multi-technologies - i.e. proximity, magnetic stripe, biometrics, keypads etc. As the readers are manufactured by us, there is no problem with compatability, and all readers carry our normal guarantees..

LPMI (E)

Made from robust ABS, and fully weatherised, the LPMI is a standard sized proximity reader, while the LPMIE is a narrow style proximity reader.
Both models incorporate a tri-coloured LED for visual indication of status.

LPM

Made from high quality stainless steel, and fully weatherised, the LPM is a standard sized proximity reader, with substantial vandal resistance. It incorporates our patented reading technology, which means the reader is a stainless “block”, apart from a hairline cut, through which the reading is achieved.
The model incorporates a tri-coloured LED for visual indication of status.

Please note, all our readers include controllers and power supplies

Specification

-20 to +50 degrees
12VAC/DC, 180mA
LED Status:
Amber = Normal
Green = Entry granted
Red = Alarm

Product Code

LPMI	**ABS Standard Reader**
LPMIE	**ABS Narrow Style Reader**
LPM	**Stainless Steel Reader**
