

Cware Mobile Module

All the power of the advanced Cware management platform on the move

Feature

- ▶ Easy to use
- ▶ View live and Playback video
- ▶ Multi camera support
- ▶ Fast search with archive time line
- ▶ PTZ camera control
- ▶ Data transfer encryption
- ▶ Support for motion detection and Video Analytics
- ▶ SMS or E-mail alerts
- ▶ Intelligent site navigation and tracking with ICN
- ▶ Secure log in and user rights
- ▶ Support for 3G and Wireless networks
- ▶ Video Time Line enables access and review of recorded video

The Cware Mobile Module takes the power of the advanced Cware management platform out of the control room, making it available for mobile devices such as phones and PDA's.

Users such as security and emergency services personnel are able to benefit from comprehensive access to high quality real time video while on the move. This powerful add-on module for the Cware management platform provides mobile users with the same functionality as control room operators enabling personnel on the ground to have access to detailed video information that increases the likelihood of identification and apprehension of suspects.

The Cware Mobile Module enables users to view live and archive video from an unlimited number of cameras. Full Pan, Tilt and Zoom (PTZ) functionality for cameras made by different manufacturers ensures fast and seamless integration with CCTV networks while support for smart technologies such as motion detection, Video Analytics and ICN (Image Content Navigation) not only improves the management of often complex video data but can help with

site orientation and real-time tracking of suspects. Fast and secure connectivity to video from cameras located anywhere in the world is assured, improving flexibility for users who need access to high quality video while on the move.

The Cware Mobile Module requires a Client License and Web Interfaces. The Client License sits on the Cware System Server and compresses video images by Transcoding them. Once images are compressed they are securely distributed via 3G and Wi-Fi networks to remote users who have Web Interfaces on their mobile devices. Robust log-in encryption and user rights help protect the network at all times preserving the integrity of the video data.

Technical Specifications

- ▶ Windows Mobile 6 optimized for 480 x 800 resolution on the HTC HD Touch
- ▶ Remote Viewing via mobile 3G, HSDPA or wireless networks
- ▶ Complete management, including live viewing, recording playback PTZ control of cameras
- ▶ Based on Windows Mobile 6.1

All specifications are subject to change without notice. Every effort has been made to supply complete and accurate information herein. © 2008 by Controlware GmbH. All rights reserved.
