

# Convision Guard

Convision Guard is a Video-Alarm-Software, which was developed especially for the professional, intelligent video remote surveillance.

It is based on Java 1.3 software and supports the direct connection via an ISDN-Router.

## Convision Guard offers the following functions:

- receipt of alarm notices with video - pre and post alarm images
- acoustic message with the arrival of the alarm
- simplest live video combination
- 16 live streaming images from 4 separate senders possible at the same time
- logging of all connections and events with time and date
- post image quality processing
- archiving of video images
- creation of the alarm reports as HTML pages
- management of the video systems with the fast selection of the cameras
- user administration rights - thus the alarm handling can be documented by the user, varied user rights can be assigned.

With the Video-Alarm-Software Convision Guard an alarm verification with a live video combination can be activated. So a direct visual examination of the situation can take place locally. If a false alarm is registered, unnecessary costs are omitted, since intervention of the alarm personnel locally is not necessary.

## Fields of Application:

- video remote surveillance
- security services
- emergency center / alarm center
- admission control
- building management and security

## System Requirements:

Computer with Java 1.3, e.g. PCs with Windows 98 / NT,  
Linux or Apple Macs

Sun Workstations with Solaris  
minimum 128 MB Ram

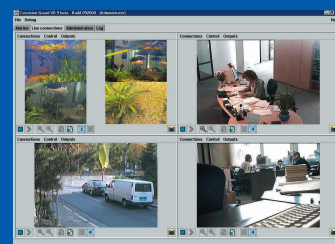

50 MB storage space for the alarm data base

Convision V600

The Video-Alarm-Software Convision Guard together with the Convision V200 and the Convision V600 A Series reshapes the extensive video remote surveillance system in which all requirements for digital video remote surveillance are fulfilled.

Convision V200

Convision Guard offers additionally Dome support for e.g. Sensormatic SpeedDome Ultra, Philips G3 AutoDome, Ernitec BDR510, Ernitec BDR550, ECV Telematria.
