USB Appliances Deliver 24/7 Asset Monitoring

The Watchport Series delivers a reliable, cost-effective solution for 24/7 environmental monitoring. Watchport devices utilize high-performance, plug-and-play USB technology to provide flexible environmental monitoring for Windows® applications. Each Watchport device is fully customizable per application and includes monitoring software for centralized, up-to-date device status. Choose from sensors for proximity, motion, humidity, temperature and water, as well as the USB Camera and analog to digital Video Encoder for surveillance. Users have the option of extending the distance between the sensor and PC with Cat-5 cable for even greater flexibility. Like all the Inside Out Networks enterprise USB connectivity solutions, the Watchport Series is designed for mission-critical environments, making the devices ideal for Point of Sale (Kiosks, ATMs), Industrial Automation and Surveillance applications.

Point-of-Sale

First Complete Line of Plug-and-Play USB Monitoring Solutions for Enterprise Applications

- ▶ A la carte product selection allows made-to-order system customization for unique application requirements
- ▶ Extend life of equipment and reduce downtime by pre-empting system failures with 24/7 monitoring
- ▶ Watchport Manager Windows-based software included at *no additional cost*; provides centralized device status and supports data logging to preserve historical information
- ▶ Choose from email, beeper or audio alerts to notify of undesirable conditions like water contamination, extreme temperatures or intruders.
- ▶ Each Watchport monitor supports Windows NT 4.0, NT Embedded, CE, Me, XP, XP Embedded, 95, 98, and 2000
- ▶ Devices are USB-powered, so no external power supply required

Kiosks

Protect Equipment and Data

Asset monitoring is key in reducing total cost of ownership in applications like server room management, kiosks and industrial automation. By pre-empting system failures, Watchport solutions extend the life of equipment and reduce downtime. Watchport provides companies the added assurance that data and equipment is monitored 24/7, ensuring maximum productivity and security through early identification and notification of undesirable environmental conditions. Simply plug any of the Watchport solutions into a USB port and increase security in seconds through real-time surveillance and equipment monitoring.

Utilize Kiosks to Increase Customer Satisfaction

Inform customers of the latest promotions and product news quickly and easily using proximity detection technology. Watchport/P Proximity Sensors may be set to automatically activate functions such as interactive touchscreens, monitor displays or cameras upon sensing the presence of a potential buyer.

Ensure Confidentiality for Employees

Watchport offers a unique approach tailored to a company's most valuable asset - its employees. Establish a Human Resources kiosk at which employees may securely check benefits status. With the Watchport/P Proximity Sensor or Motion Detection Software, the touchscreen may be set to activate only when a user is present and to darken as the employee walks away, ensuring the highest degree of confidentiality while extending the life of the touchscreen.

Take Control with Watchport Manager

The Watchport Manager graphical user interface (GUI) is fully customizable, allowing total customization and easy device recognition. The flexible alert system supports user-selectable email, beeper and audio notification. Or, integrate Watchport devices into an existing host application. The Watchport Manager has a selectable update interval and supports data logging, allowing users to view camera locations real-time from a remote site for centralized surveillance and monitoring.
