▶ Integrated LED to indicate signal transmission

▶ Reliable 433MHz technology

▶ Long-life lithium batteries included

▶ FCC/IC approved

WS4949

The WS4949 two-button wireless key adds wireless convenience and value to any DSC security system by providing users with a competitively priced wireless solution that includes a number of features and benefits. The WS4949 provides users with a sense of control over their security system and the added confidence that comes with portable personal protection within the home. Compact and user-friendly, the WS4949 features two scratch-resistant buttons that when activated perform either away arming or disarm functions. When the two buttons are pressed simultaneously the panic function is activated.

Easy to Use

The WS4949 provides users with an uncomplicated, portable means to arm or disarm their security systems. The unit's two large buttons are clearly defined to ensure trouble-free activation in times of emergency. The buttons of the WS4949 are programmable and can be assigned to perform different functions.

False Alarm Reduction

False alarm reduction has resulted in the introduction of activation delays that require users to press and hold a button for a period of time before its function is initiated. To activate the away arming/disarm functions of the WS4949, press and hold the appropriate button until the one-second activation delay expires. The WS4949 incorporates a full, three-second activation delay on its panic function to help reduce false alarms. To activate it, both buttons need to be pressed simultaneously.

Visual Confirmation

A red LED indicator, located between the two buttons on the WS4949, flashes to indicate that a transmission has been sent to the security system.

Value Added

The WS4949 uses reliable 433MHz wireless technology, long-life lithium batteries and is compatible with all of DSC's current wireless receivers.
