

Mentor™ Screen Recorder Performance Enhancing Solution

The Mentor Screen Recorder is a component that is part of DVTel's iSOC™ solution. Mentor is an intelligence gathering tool which provides insight about the operations and performance of system users. It provides a non-invasive view of any networked PC which can be seamlessly synchronized with all of the systems video, audio and data in both live and archived modes.

An authorized Latitude Network Video Management System (NVMS)™ user can view Mentor channels which are available for access using the normal camera tree within the application. It can be programmed to record mentor channels on a schedule, record on alarms and manually record. The Latitude NVMS software can support unlimited Mentor channels per system, which requires a regular camera connection license per channel.

Mentor is ideal for a variety of situations by viewing of user operations. It presents a view of what the operator is watching so that their behavior and responses can be coached with either real-time feedback or post-performance analysis. Mentor provides a powerful training tool for security officers as their proficiency in the software can be tracked by management.

It is also critical in emergency situations where analyzing errors or audit trails of an officer's activities can be recorded and used during investigations. An additional benefit is that it allows remote learning or viewing a remote machine.

Features:

- Records operator screens
- Turns any networked windows computer into a camera
- Non-invasive agent uses minimal computer resources
- Real-time live viewing and recording of up to 3 FPS recommended
- Screen resolutions up to 1280 x 1024
- Seamlessly synchronize with all other DVTel intelligent Security Operation Center (iSOC) systems:
 - Recording controls
 - Scheduled, manual and event recording
 - Generate and manage system events
 - Computer shut down or service stopped
 - Tie to schedule and coverage

Applications:

- Education
 - Create operational training videos with Mentor
 - Monitor up to 32 students
- Data tracking
 - Provides a synchronized view of associated systems including iSOC unified applications and integrated systems
- Desktop monitoring
