- Wireless (802.11b) handheld computer.
- Preinstalled with Package Mobile or Satellite Mobile software.
- Provides integrated barcode scanning.
- Includes an alpha-numeric keypad for easy entry.
- Allows for use while not being connected to a wireless network

VISITOR MANAGEMENT SOLUTIONS FOR MOBILE AND REMOTE ENVIRONMENTS

- **Ideal for mobile and remote environments** - For checking in and managing vehicles, visitors and packages at guard gates, loading docks and other high security remote/mobile locations.
- **Easy to learn and use** - EasyLobby software pre-loaded onto user-friendly handheld devices.
- **Improved remote location security** - Provides remote locations with the same visitor management security technology deployed in the main organization.
- **Efficient** - Performs fast data capture and check-in.
- **Rugged design** - Durable handled devices can withstand tough outdoor locations and conditions.

As part of HID Global's EasyLobby® Secure Visitor Management™ software portfolio, the mobile wireless solutions family includes SVM Mobile™, Package Mobile™ and Satellite Mobile™. These products are pre-loaded onto handheld wireless devices that make it easier and more efficient to control and manage visitors, vehicles, assets and packages in mobile and remote environments.

HID's EasyLobby SVM Mobile™ is ideal for checking in and managing vehicles, visitors and packages at guard gates, loading docks and other remote/mobile locations, avoiding multiple trips to and from a computer station. The solution includes a wireless handheld computer and performs fast data capture by reading the driver's license and automatically populating the visitor form field so minimum typing is required at checkin (license read populates the visitor form fields automatically in 1-2 seconds).

EasyLobby Package Mobile™ allows users to deliver packages directly to employees located throughout a facility. This eliminates the need for each employee to pick up the package him/herself. The software captures multiple signatures for packages delivered and does not require wireless networking throughout the facility. When placed back into its cradle, the included handheld computer automatically syncs data to and from the EasyLobby Package database.

EasyLobby Satellite Mobile™ is ideal for checking and enforcing clearances to restricted areas with a quick barcode scan of a visitor badge. Utilizing the included handheld wireless computer, the software captures the arrival and departure time to and from these restricted areas. The solution also eliminates the need for a full workstation with power and network connectivity (wired).
