

Never before has a single manufacturer offered such a comprehensive range of CCTV cameras. The Honeywell video range comprises the E-series and the Systems series which, between them, suit all possible application requirements.

Honeywell Video Systems E-series colour and monochrome cameras are ideally suited for use in day to day surveillance applications. Designed for value, the E-series range saves time and money with easy installation and reliable performance. Their off-the-shelf feature set is developed for high picture quality in standard applications and they require little to no adjustment once installed.

All cameras in the range support direct drive and auto iris lenses to ensure quality video in fluctuating light conditions. Regardless of lens type, fitting the camera is simple with a built in C/CS mounting ring and 4-pin auto-iris connector as standard. The power connection is made with built in push terminals, eliminating the need for a screwdriver and saving installation time.

The E-series cameras include an automatic electronic shutter for changes in light level and an automatic backlight compensation option for viewing objects in the foreground with bright light in the background.

All cameras in the range provide reliable video quality even in low light conditions, making them the economical choice for most standard surveillance applications.

The Systems series range builds on this firm foundation but offers a market leading feature set. Unshielded Twisted Pair or NVT™ compatibility appears on most. Backlight compensation comes in 4 or 8 windows to maximise image quality in adverse conditions along with gamma correction, peak white inversion and sharpness adjustment. Discrete Cosine Transfer (DCT) enables efficient image processing to reduce image data sizes in low light conditions optimising the capability of associated digital storage devices. This gives more efficient use of space on the digital recorder's hard drive, allowing longer recording times. Wide ranging power supplies make installation and product selection far simpler.

Contents:

Medium resolution cameras colour and monochrome

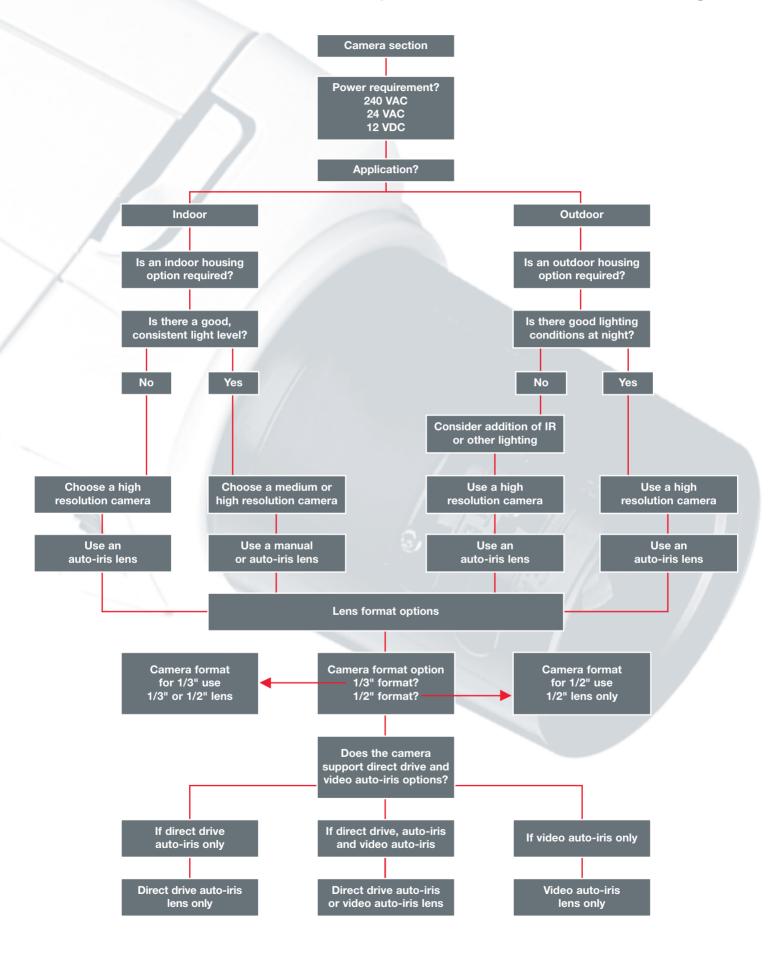

High resolution cameras colour and monochrome

High resolution systems cameras

Colour/mono - day/night cameras
