GIVING NEW VALUE TO IMAGES

## ICD-851P ICD-853P ICD-855P

FULL 600 TVL PERFORMANCE

### FEATURES

#### High Resolution

High resolution of 600 lines using full digital image processing and unique algorithm technologies.

#### Intelligent Motion Detection & Tracking

Intelligent function that automatically detects motion of an object.

It can set a virtual fence so it sounds an alert if an object passes/enters/exits the virtual fence or virtual area.

#### Extended Dynamic Range

Actively control the gamma compensation.

#### High Sensitivity

The ICD-850 Series implements images of high sensitivity using the latest IT CCD technology.

#### Low Illumination

It uses digital signal technologies such as low illumination and day/night function that enables your camera to see objects even in the worst environment.

#### Superior Backlight Adjustment

When a object has a bright illumination or sunlight behind it, the camera automatically improves the shade picture quality.

The ICD-850 series is the latest addition to Ikegami's renowned stable of high sensitivity CCTV cameras which allow wider light spectrum coverage to the near infra-red wavelength to provide clear picture reproduction in very low light conditions. The ICD-850 series all have Day/Night function with the ICD-853P and ICD-855P having a well-designed electronically controlled moving filter system making these two cameras highly IR sensitive. All models come equipped with an improved CCD sensor providing higher resolution of 600TVL horizontal resolution in Colour and Monochrome modes. The whole series also benefit from enhanced video analytics and OSD control allowing easy set up of their many user friendly functions.
