FLEXIBILITY

TS690R

Menvier Security.
The most technically
advanced intruder
alarm solution.

Menvier Security is a leading brand of Cooper Security Ltd, part of Cooper Industries who employ over 28,000 people in 100 manufacturing sites around the world.

Menvier Security has more than 20 years experience as a leading manufacturer of security systems for domestic and commercial premises, all of which exceed stringent industry standards.

Professional security alarm installers recommend Menvier Security because they know it represents excellence in technology, unfailing reliability and tremendous possibilities for expanding the system.

For the most comprehensive approach to security, don't make it difficult, make it Menvier Security.

MENVER SECURITY TS690R

The Networker TS690R is an advanced wirefree security alarm control system from Menvier Security. The system uses state-of-the-art electronics to provide comprehensive protection for both domestic and small business premises. In contrast to the TS690R's sophisticated operations, it is easy to programme. However, the most significant advantage of the TS690R is that it can be fitted in your premises easily with a minimum of wiring, eliminating mess and disruption.

Flexibility in design

Wirefree technology allows an alarm system to be installed and upgraded efficiently, whilst ensuring that the installation has no unsightly wiring and the disruption to the end user is kept to a minimum. There are of course, circumstances where hardwiring may be an advantage (e.g. to connect specialist detectors or remote keypads). Under these circumstances, the TS690R is the ideal solution as it provides the flexibility to grow not only via wireless detectors, but also using any hardwired detectors and up to 4 remote keypads.

Flexibility for growth

The TS690R adapts to meet changing security requirements. Alarm systems monitor specified locations in your premises such as offices, rooms, corridors and garages. Up to 30 wireless plus 8 hardwired zones can be monitored with the TS690R. This gives you flexibility to extend your security system as you extend or change the layout of your premises.

Flexibility in detail

Part-setting is a useful feature that allows you to secure parts of your premises while permitting free access in other parts. This can be particularly convenient in a commercial environment when staff are working late or areas of the building are not occupied during certain times. In a domestic situation this feature allows the downstairs of a residence to be set during the night or the perimeter of the house and garage while everyone is watching TV.

Flexibility for individuals

Requiring all members of staff, contractors or household to remember a single security code number leads to inconvenience and false alarms. The TS690R allows up to 10 individuals to create their own code numbers. In addition there is the option to use remote setting devices rather than remote keypads to full set, part set and unset the system. The remote setting device provides the additional feature of a panic alarm in times of need.

Improved management

The efficiency of management can be improved with information collected by the TS690R's 150 event memory. It logs the time, date and user code of all system activations. This data gives an instant picture of who was where at any time of day or night, providing managers with a powerful investigative and analytical tool.

Additional peace of mind

A speech dialler such as the SD1+ is the ideal companion for the TS690R as it provides additional protection, rather than relying on the outside bell to attract attention. When the alarm is triggered, a speech dialler will ring a friend or neighbour and send a speech message, which you will have previously recorded yourself, to inform of the alarm activation. They can then investigate, and if they believe that you are being burgled, can ring the police for you.
