

The NCB358 is a professional 5-megapixel fixed camera designed for any indoor applications where the need for image details is indispensable, delivering superior high definition video quality up to 30fps. A true day/night camera, the NCB358 features enhanced sensitivity backed by proprietary low light technology and 3DNR to provide unprecedented image clarity under the cover of darkness. The NCB358 can be used both indoor and outdoor when mounted with compatible outdoor housing to help protect the camera in challenging environments. Other supported features include Ultra WDR, triple streaming with multiple profile settings, and local storage.

3D Noise Reduction

The 3DNR technology takes traditional DNR a step further, removing digital artifacts and grainy appearance from frame to frame, while maintaining image sharpness at low light settings, which results in more efficient bandwidth utilization and less storage space consumption.

Triple Streaming with Multiple Video Profiles

The camera supports H.264 and MJPEG streams and allows triple streaming simultaneously. Video streams can be further managed in profiles, enabling flexibility for users to designate bandwidth storage, and other video properties as appropriate.

Ultra Wide Dynamic Range

Compared with standard WDR, the newgeneration WDR features sophisticated algorithm to further expand its dynamic range of the lighting conditions. It allows the camera capturing greater scene details in high contrast settings or in scenes with extremely bright and dark areas.

Triple Power Option

In addition to 12V DC and 24V AC, the camera is also designed to support PoE (Power over Ethernet) to provide ample power to the camera, greatly reducing installation costs while adding flexibility to the camera deployment at the same time.

True Day/Night with Mechanical ICR

AFeaturing IR Cut Filter Removable (ICR) function, the camera is perfect for capturing truer color images at day time by filtering out IR. At night, IR is allowed for the camera working in B/W mode and being more sensitive to IR, thereby capturing clearer monochrome images.
