#### **VARIOUS OPTIONS**

## **Back Cover BC-4** for all models

Conceals the back side of a pole mounted detector.

# Solar Battery Unit SBU-4

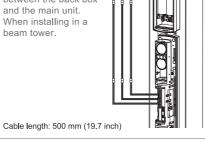

for SL-QDM only

Supplies power by high efficiency solar battery. Li-ion rechargeable battery and Anti-Bird Needles are included.

between the back box and the main unit. When installing in a beam tower.

Extension cables

### **Battery Common Unit BCU-4**

for SL-QFR/QNR AX-TFR only

Shares power source and low battery signals between the main unit and the wireless transmitter.

Input voltage	3.2 - 4.0 VDC		
Current draw	Approx. 5 µA at 3.6 VDC (no load		
Output voltage	Normal	Approx. 2.3 - 3.6 VD0	
	Low battery	Approx. 2.0 - 2.6 VD0	
Output current	100 mA (max.)		
Operating temperature	-20°C - +60°C (-40°F - +140°F)		
Operating humidity	95% (max.)		

## **Beam Alignment Unit BAU-4**

Aligns optical axis automatically. (SL-QDP/QN/QFR/QNR: applicable to receiver only)

**Extension Cable with Connector EC-4** 

#### **SHORT RANGE MODELS**

#### AX-100TFR/200TFR

#### BATTERY OPERATED PHOTOELECTRIC DETECTOR

AX-100TFR : Detection range 30m / 100ft. AX-200TFR : Detection range 60m / 200ft.

#### AX-70TN/130TN/200TN

#### SHORT RANGE PHOTOELECTRIC DETECTOR

AX-70TN : Detection range 20m / 70ft. AX-130TN : Detection range 40m / 130ft. AX-200TN : Detection range 60m / 200ft.

#### AX-100TF/200TF

#### 4ch. BEAM FREQENCIES SELECTABLE MODELS

AX-100TF: Detection range 30m / 100ft. AX-200TF: Detection range 60m / 200ft.

No. 77043-01-15747-1405

The IR transmitter and receiver must be perfectly aligned in order to achieve the optimal operation of the photoelectric detector. However, a great deal of patience, time and effort is required to ensure that the receiver is receiving the maximum amount of infrared signal possible from the transmitter. Optex has the solution the SL series is designed to lighten your workload while achieving perfect alignment.

## SNIPER VIEWFINDER™

#### X2 MAGNIFICATION LENS

The new telescope lens has a high level of visibility for optical alignment work. Even over long distances, a perfect installation and stable performance can be achieved in a short period.

## BEAM ALIGNMENT UNIT: BAU-4 (option)

The BAU-4 beam alignment unit automatically and accurately adjusts the optical axis. This allows peak performance and gives one technician the ability to install the 200 m (650 ft.) Smart Line detector by himself.

# LED INDICATOR AND SOUND ASSIST

#### SL-QDM:TRANSMITTER AND RECEIVER SL-QDP: RECEIVER only

The alignment level indicators have 5 LEDs, each LED represents the level of alignment, ranging from poor to excellent. The optical alignment level can also be checked by sound.

RECEIVER

# UPPER/LOWER **BEAM SELECTION BUTTON**

#### SL-QDM/SL-QDP only: TRANSMITTER AND RECEIVER

Optical alignment can be done without using a beam blocking plate since the SL has upper/lower beam selection button which enables to turn on and off the upper and lower beam alternately in the installation mode.

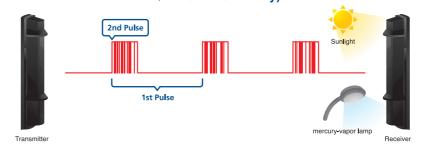

### **Double Modulation Beam (SL-QDM/QDP only)**

The SL-QDM and SL-QDP series offer double modulation beams that differ in pulse patterns. This can enhance signal discrimination against potential noise interference such as sunlight or other external light sources, resulting in a reduction of missed or false alarms. Together with OPTEX triple layered Sunshine Protection Technology, it ensures high reliability under the severe outdoor security environment.

#### **QUAD BEAM & UNITED APPEARANCE**

By employing quad beam, it dramatically reduces false alarm caused by birds and falling leaves. Moreover, it is also important that the housing design of both long and short beams is harmonised. 60m (200ft.) range models, SL-200QN/SL-200QDP/SL-200QDM with a wide beam pitch is now available.

Conventional short beam

#### **IP65 WATER/DUST PROTECTION**

Rubber seals is used for all conceivable points where water or dust may penetrate, such as wiring holes, wire ports and the outer openings on chassis.

### **UV-resistant POLY CARBONATE COVER**

Front cover is not clouded by ultraviolet ray during a long term. Therefore it will maintain the transparency of IR beams.

#### **SLIM BODY & LIGHT WEIGHT**

20% reduction of the body size and 15% reduction of the weight come together in the SL series.

#### **BEAM BLOCKING PLATE**

The plate can firmly be fixed on the lens unit without fear to be blown off by wind. The plates can be stored in the back of the front cover.

### **ANTI FROST DESIGN** (Hood design)

The hoods are positioned on both the upper beam and the lower beam to secure a high and stable beam power by preventing frost from attaching to the front cover.

#### **VIVID INTERIOR COLOR**

Easy-to-see vivid interior color for optical alignment.

#### **ALIGNMENT DIAL**

The alignment no longer requires a screwdriver. All you need is touch with your fingers for precise adjustment.

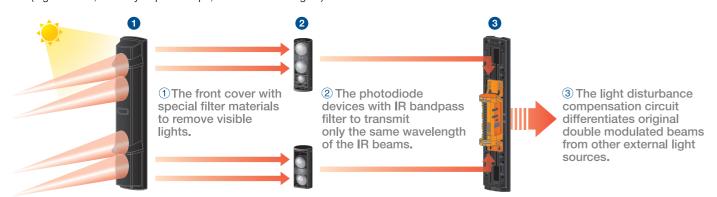

#### **QUAD BEAM WITH ASPHERICAL LENSES**

The high-grade aspherical lens create more sharply defined and precise active infrared beams.

# **ENVIRONMENT RESISTANCE**

## SUNSHINE PROTECTION TECHNOLOGY (SL-QDM/SL-QDP only)

The sunshine protection technology has a triple layer construction to give better performance against external light sources (e.g.:The sun, mercury-vapour lamps, and fluorescent lights).

## BEAM POWER CONTROL SELECTOR (SL-QDM/SL-QDP only)

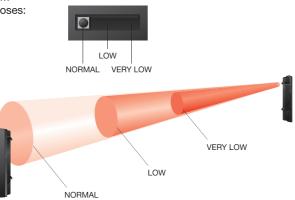

The beam power control selector allows you to manually adjust beam power from NORMAL to LOW or VERY LOW. This function is effective for the following purposes:

For countermeasure against crosstalk due to reflection of wall or floor by reducing beam power.

For countermeasure against interference due to unstable S/N (signal / noise) ratio when using multiple photo beams for long distance or beam stacking applications.

To reduce beam power when using the detector for a distance shorter than the rated distance.

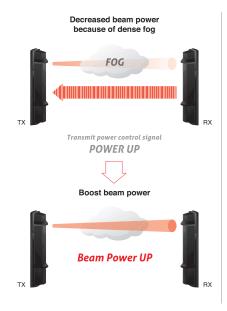

To search the peak value when making optical alignment to support perfect alignment.

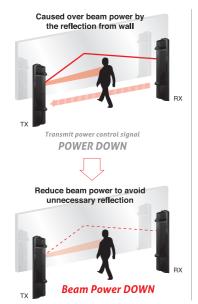

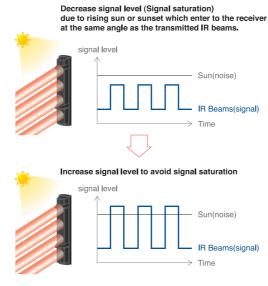

# A.T.P.C.-AUTOMATIC TRANSMIT POWER CONTROL (SL-QDM only)

Automatically controls, adjusts and optimizes the power of the beam and maintains optimal performance. It decreases false and missed alarms caused by fog, frost, cross talk, and signal saturation.
