Enrolment and PC Interface Kits

The PAC Oneprox PC Interface Kit is designed to ease the task of enrolling credentials. An enrolment desktop reader connects via an interface kit to a serial port on the host administration PC, and the ID device numbers are read directly into a database.

There are four kits available, an embedded PAC Oneprox proximity enrolment reader option (PC serial input), a PAC Wiegand interface option which enables the connection of a Wiegand enrolment reader, an embedded PAC Oneprox proximity enrolment reader with built-in line driver and PC USB interface, and the PC Interface for installations where an enrolment reader is not required, for example card numbers may be manually entered into the software. Also available is a standalone PAC Oneprox USB proximity enrolment reader, ideally suited for IP enabled access control solutions.

In use, keyholders/cardholders are simply and efficiently added with PAC® SecureNet™ administration software by presenting a credential to the enrolment reader which reads a credentials unique embedded code. The reader may also be used to easily identify a lost credential and bring up the associated keyholder/cardholder record.

All kits provide extended direct communications between the Administration Host PC and the nearest convenient PAC 512 Access Controller which can be located up to 1,000m (3,280ft) away.

ONEPROX™ 125KHz & 153KHz

Key Features:

- Up to 30mm (1.18 in.) reading range
- Easy to install line driver enables connection to controller up to 1,000m (3,280ft) away
- Reads KeyPAC (125KHz) and PAC (153KHz) technologies
- Compatible with PAC 2100/2200 series and PAC 512 door controllers
