- 4 to 8 digit codes
- Up to 50 codes
- Optional 20 digit lockout
- 1 to 99 sec door open time
- Locks/power supplies sold separately
- IP67 rated - suitable for external use

### About

TOUCHLOCK compact is a single door access control system with all of the electronics within the housing of the keypad. Compact systems can be installed to many doors over a site. The K series keypads are available in three sizes as shown in the illustration below.

### Installation

The compact keypad has two wires which connect to the lock and two wires which connect to the power supply. There are two wires for connection to an exit button if required. The cable exits centrally from the back of the keypad making drilling and mounting very accurate. All settings and codes are programmed via the keypad using the master code.

### Operation

If a valid code is entered access is granted. Codes are changed via the keypad using the master code.
