

The Pyronix TWIN ALERT

Speaker/Sounder

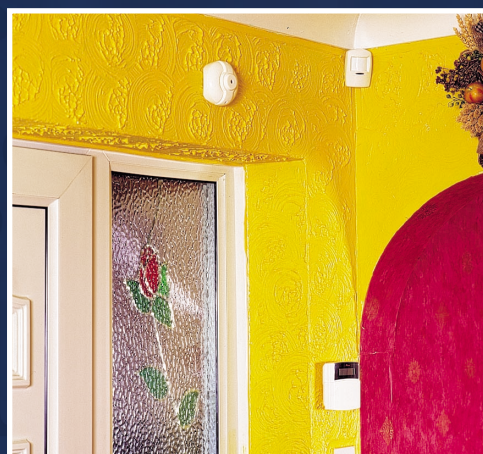

Actual Size

The Twin Alert combines both a speaker and sounder in a single unit. It eliminates the need for two separate products situated in two different locations.

The speaker element of the Twin Alert will mimic keypad tones and the sounds associated with the setting and unsetting of a system. The volume of the tones can be adjusted to suit individual requirements. The primary purpose of the speaker is to enable users to hear confirmation that the system has set correctly upon leaving the property.

The Internal Sounder will only activate on alarm and will override the pre-set speaker volume level, providing a siren output of 100 decibels at 1 metre. This high volume internal siren acts as a deterrent to intruders and will also alert any inhabitants.

The Twin Alert is manufactured at Pyronix using state-of-the-art technology which ensures consistently high quality and excellent reliability. The components of the Twin Alert are protected in a robust 3mm thick case which will blend in with any interior décor and can be mounted in a number of ways; i.e. on the ceiling or in the corner of a room.

Pyronix Limited, Pyronix House, Braithwell Way, Hellaby Rotherham, S66 8QY, ENGLAND.
