

Warning: Isolate mains before working on this module. This unit accepts 230Vac. input and outputs 24Vac for camera powering with video throughput. It has been specifically designed to power 1-8 cameras within the Q EYE™ camera range. Please refer to the Q⁸ Power handbook and installation guide (supplied on CDROM) for more comprehensive instructions.

*The 8 LED indicators on the front panel provide verification that power is on to the camera channels. If an LED is not lit then power has been cut to the relevant channel. The most likely cause of this is a blown fuse. Fuses are located on the front panel.
