Description

The Siqura® FD22 is a network fixed dome camera in a vandal-proof dome housing with an integrated varifocal lens providing high resolution pictures.

1.3 Megapixel

The FD22 has dual-stream capability for the simultaneous streaming of MPEG-4 and MJPEG video. The MJPEG video can have a resolution up to 1.3 megapixels (four times VGA), with more detail than a traditional analog high-resolution cameras provide.

Two-Way Audio

Two-way audio enables observer-object communications.

Backlight Compensation

In situations where the observed object is unclear due to being under- or overlit (such as in a hallway entrance with many windows), backlight compensation improves image exposure by using the light near the object as a reference.

Power Source Choices

This megapixel camera can be powered by 12 VDC or 24 VAC (terminal block) or over the network with 802.3af compliant Power-over-Ethernet sources.

Vandal-Resistant Housing w/Integrated Varifocal Lens

This fixed dome network camera is suited for indoor and outdoor applications, even in severe environments. The FD22 is made vandal-resistant by using a robust housing and security Torx® screws.

Privacy Masks

Privacy Masks cover sections of the image. This feature is often requested for such situations as city center surveillance and point of sale keypads.

Tamper Alarm

Covering or moving the camera will trigger an alarm. The camera can be configured to send pre and/or post alarm snapshots to an email or FTP server.

Siqura Surveillance Solutions

The Siqura® FD22 is part of Siqura, a complete collection of surveillance equipment and solutions. Siqura offers video codecs/servers, IP cameras, video management, network storage, and configuration software.
