

## Operator Office™

### Features

- PC viewing software
- Supports MPEG-2 and MPEG-4
- Emulated PTZ support
- Bidirectional audio and contact closures over IP
- Event handling
- Recording and snapshot facilities
- Password protected
- Intuitive graphical user interface

**Software**
**Operator Series**

### Description

Operator Office™ PC software enables the operator IP surveillance in an intuitive and comprehensive overview. The software allows the operator to simultaneously view up to four live streaming images on a standard PC. The cameras are shown in both an orderly tree-view and laid out in graphical map representation. It supports Optelecom-NKF's C-series and S-series codecs/servers for both MPEG-2 and MPEG-4. Operator Office™ features alarm/event handling, audio, instant recording, export recorded video and snapshots. This helps to facilitate the operator to act effectively and efficiently, especially in mission-critical situations.

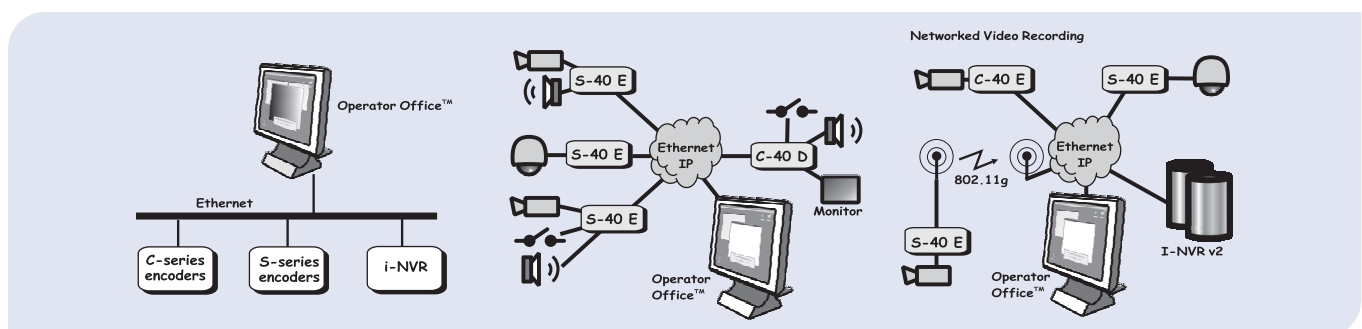

The software offers event-driven scripts to aid the operator in his job. Upon an event, the associated images can be switched automatically to one of the view-ports, while activating an audible signal (.wav file) and an external alarm-contact.

With Operator Office™, Optelecom-NKF offers a powerful video surveillance tool, which renders traditional video-matrix equipment and decoding hardware redundant, resulting in a drastic reduction of costs.
