

Access Sentry™, developed by CI³ Software, is a comprehensive visitor management system that lets your front desk personnel record anyone and anything that enters or exits your building. This highly effective software package allows you to capture visitor information, print badges in advance or upon visitor arrival, pre-register visitors and network multiple lobbies, building and locations. This system replaces the old-fashioned “sign in” book with complete, database-driven software that automatically organizes your entry/exit data for easy record keeping.

STANDARD FEATURES

- Capture visitor information in a computerized log
- Pre-register visitors and groups
- Temporary Employee Logging
- Print badges in advance or upon visitor arrival
- Look-up contact information in employee database
- Design your own badge or use templates
- Many built in reports
- Capture, store and print visitor photos
- User password protection
- Procedures
- Customized Reporting
- Custom Badge Design
- Emergency Reporting

EXTENDED FEATURES

- Pre-register visitors via web browser
- Business card scanner
- Signature Capture - USB
- Photo Capture - USB
- Drivers License Scanner

KEY FEATURES

CI³ Software, Access Sentry™

Guest/Contractor Logging

Guests, vendors, and contractors can all easily be given short-term or long-term temporary access. With the optional badge printer, the lobby personnel can custom design temporary paper badges.

Restricted Monitoring

Access Sentry provides notification of unwanted/restricted/flagged persons.

Group Logging

Access Sentry allows the lobby personnel to enter a group of people in advance in order to streamline the logging process.

Browser-based pre-notification

As an option, Access Sentry allows company employees to pre-authorize expected visitors via the Internet, Intranet, or network.

Photo Capture

An optional photo capture kit allows personnel to take photos of guests, contractors and/or employees.

Drivers License Scanning

Access Sentry makes it easy to log in visitors, by allowing the front desk personnel to scan the visitor's information directly from his or her drivers license.

SPECIFICATIONS

WORKSTATION

Processor	90 MHz
