

The C•CURE 800 Configuration Import/Export Utility is a tool that allows customers to design and load security objects into the C•CURE 800/8000 system.

Using the tool, customers can design and enter configuration data into a Microsoft Excel spreadsheet to quickly and easily configure the C•CURE 800/8000. These data include apCs, apC Inputs, apC Outputs, apC Readers, iSTARs, iSTAR Inputs, iSTAR Outputs and iSTAR Readers, as well as Bi-directional interface data.

FEATURES & BENEFITS

- Modify configuration data from an existing C•CURE 800/8000 database.
- Create new configuration data from scratch without an existing C•CURE 800/8000 database.
- Import configuration data into a C•CURE 800/8000 database.

OVERVIEW

The C•CURE 800 Configuration Import/Export Utility is a tool that Software House technical partners can use to design, enter, and update configuration data using a Microsoft Excel spreadsheet.

The C•CURE 800 Configuration Import/Export Utility enables technicians to:

- Export and modify configuration data from an existing C•CURE 800/8000 database
- Create new configuration data from scratch with or without an existing C•CURE 800/8000 database
- Import configuration data into a C•CURE 800/8000 database

Important Note; The C•CURE 800 Configuration Import/Export Utility only works with C•CURE 800 v8.1 and higher and the Utility must be the same version number as the C•CURE 800 system in which it is being used.
