STAND ALONE ACCESS CONTROL

DOORCARD 250

The Doorcard DC250 access control unit is ideally suited to small and medium sized installations including clubs, offices, computer rooms etc. The DC250 can control access for 250 users through each door. Cards (or tokens) can easily be added / deleted individually making the system most versatile.

Normally the DC250 access control unit is installed just inside the door with a short cable through the wall to the reader (magnetic stripe or proximity), another short cable to the lock release and

a third to the power supply. With this simple installation procedure the time taken to fit an access control system is dramatically reduced. In addition the simple operation means that programming the DC250 access control unit is extremely quick.

To aid installation still further use the DC250K starter pack which includes DC250, card reader, power supply, lock release and 10 cards. In short everything you require except cable and clips.

It couldn't be easier.....

KEY FEATURES INCLUDE

- Single door access control
- 250 card memory
- card (tokens) individually added / deleted
- Easy to install
- Easy user programming
- Magstripe or Proximity
- Bank card compatible
- Timed exit request
- Inhibit cards input (time clock)
- Programmable lock timer (01 - 99 seconds)
- Door monitor input
- Non volatile data storage for a minimum of 10 years
- Fully CE compliant

TECHNICAL

Power Supply	12v dc
Power Consumption	20mA quiescent 60mA operating
Maximum Switched Load	2 A @ 24v dc
Dimensions	83 x 143 x 25 (hwd mm)

ACCESSORIES

DOORCARD CARD READER CONTROL UNITS
