

MICROgarde

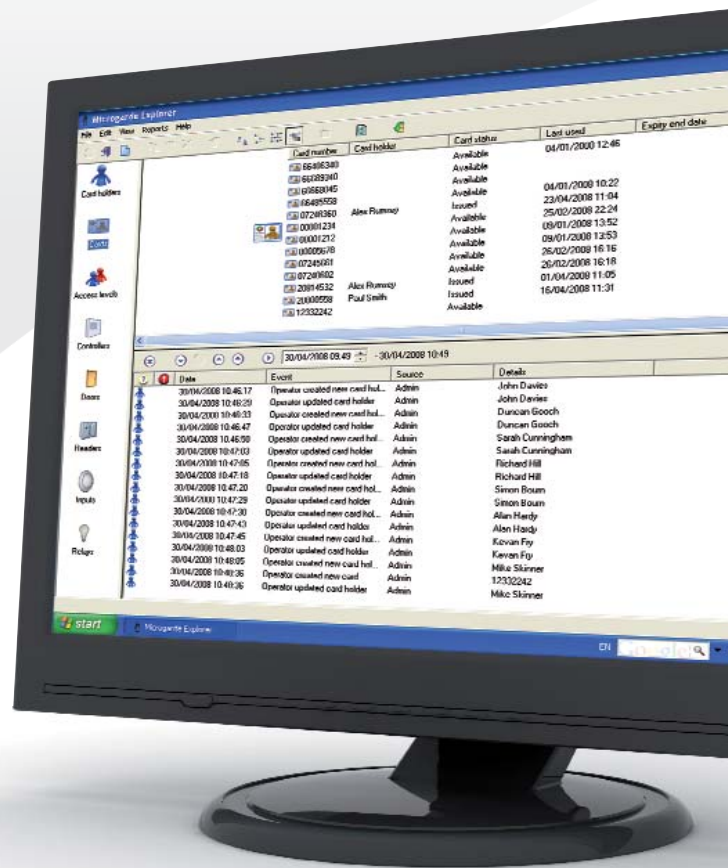

access management PC software

All MICROgarde® controllers are supplied complete with MICROgarde® access management PC software at no additional cost.

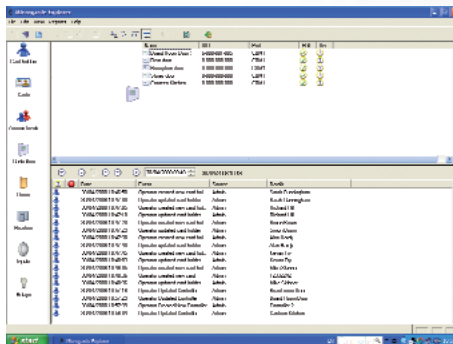

The MICROgarde® software suite is an extremely user-friendly and intuitive package that provides a wealth of access control functionality in addition to some innovative and very useful features.

Following Microsoft Windows® convention ensures that you feel immediately at home and can familiarise yourself with the controls in a matter of minutes. This also minimises the need for any specialist training saving you both time and money.

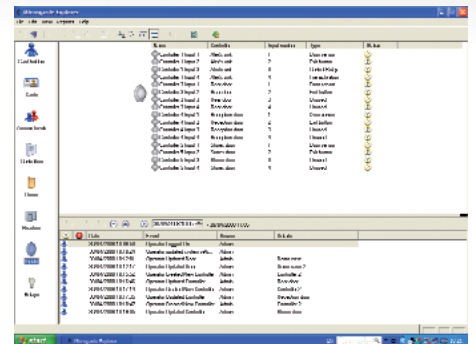

Based around the trusted Microsoft SQL Express database engine, MICROgarde® software provides integration capabilities through the Application Programming Interface (API). Additionally, MICROgarde® allows you to interface to Fire and Intruder panels straight out of the box without the need to purchase any additional software modules or licences.

Controllers

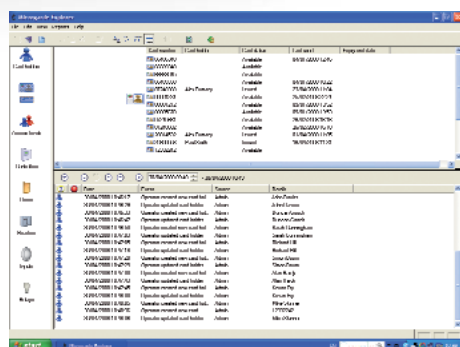

Inputs

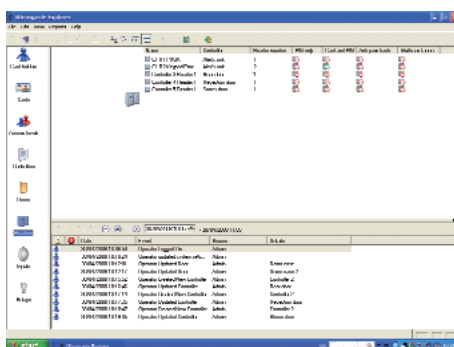

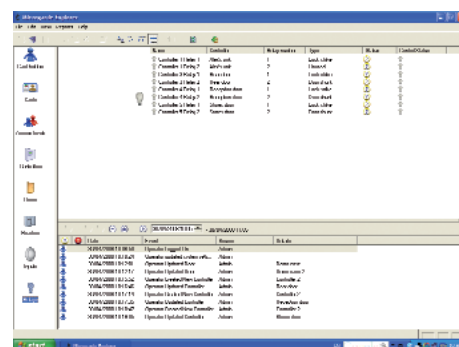

- MICROgarde® software is easy to install and use for the control of both MICROgarde® I and MICROgarde® II access control units
- MICROgarde® software can be used to manage between 1 and 200 controllers
- Every MICROgarde® controller is supplied with this software free of charge
- A getting started feature takes you through a step-by-step process from successfully bringing the first controller on-line to validating the first card
- Included is a Controller Wizard that automatically detects and guides you through the setup of controllers greatly reducing commissioning time
- MICROgarde® controllers can be connected to serial ports, TCP/IP ports or a combination of both providing maximum flexibility
- Full context-sensitive help provides you with concise information precisely when you need it
- Anti-passback and man trap (interlock) features of the controller are fully supported
- Fire door release feature allows the interfacing of the MICROgarde® system to a fire panel. Release selected doors in the event of the fire alarm being activated
- An enrolment reader feature allows you to specify any reader in the system on which cards can be enrolled. Removes the need to purchase a separate enrolment reader thereby saving you money
- Dual custody feature requiring at least two people to present their card is ideal for higher security applications or areas
- Automatic card expiry increases security and also is useful in visitor and club applications.
