

NEXIVA[®]

VIDEO MANAGEMENT SOFTWARE

Manage Your Security Operations More Effectively

Nextiva[®] Video Management Software (VMS) streamlines video security operations and helps you rapidly make sense of the vast volumes of video and data you capture.

Nextiva VMS features powerful, fully integrated video management tools, including automated system health monitoring and event responses, investigation management, a software-based virtual matrix, interactive facility maps, a powerful and intuitive video viewing interface, an ultra-thin client for remote/mobile users and more. Nextiva VMS makes your video security more manageable, reliable, and cost effective, whether you seek to secure a single location or large-scale, geographically distributed operations.

Developed by a worldwide IP video leader with more than 15 years of experience in video solution development and deployment, Nextiva VMS provides a scalable, powerful, and easy-to-use IP video management platform that adds value to your physical security investments and helps you achieve your security and operational objectives.

What can Nextiva Video Management

Protect your people, property, and assets.

Nextiva VMS offers policy-based video distribution, networked video viewing, and investigation management to help security staff rapidly detect, act, and investigate security breaches and other threats. Automated video system health monitoring helps IT staff manage large, geographically distributed video operations and streamlines video system uptime to help ensure video availability.

Evolve your video security operations to address changing needs. Nextiva VMS is designed for deployments of virtually any size and can support virtually any number of locations. With Nextiva, you can readily expand your video operations, as needed. Nextiva's comprehensive third-party IP camera and physical security system integrations provide enhanced capabilities and add value to your physical security investments.

Integrate Seamlessly with IT. Today's video systems often reside within the enterprise IT infrastructure, and video technologies must satisfy modern enterprise requirements for scalability, security, reliability, and manageability. Nextiva VMS was not only designed to effectively address a variety of LAN/WAN/WEB networking topologies, but also includes such features as Active Directory integration, redundancy, virtualization support (VMware Certified), and data security, making it an enterprise solution your IT stakeholders can effectively support.

Provide Greater Situational Awareness. With Nextiva Review, security functionalities are integrated into a single, configurable user interface for optimal ease-of-use and operator efficiency. User rights management allows you to control the capabilities and system access that are available to security staff.

- ✓ View live video, playback recorded video, PTZ Control, Export Video, Guard tours, dynamic and flexible customizable layouts & color skinning.
- ✓ Interactive map display of facility layouts and camera locations, with alarm status and "hover over" preview
- ✓ Choose to use up to 4 physical screens and 256 simultaneous video tiles
- ✓ Integration with Surveillance analytics and license plate recognition

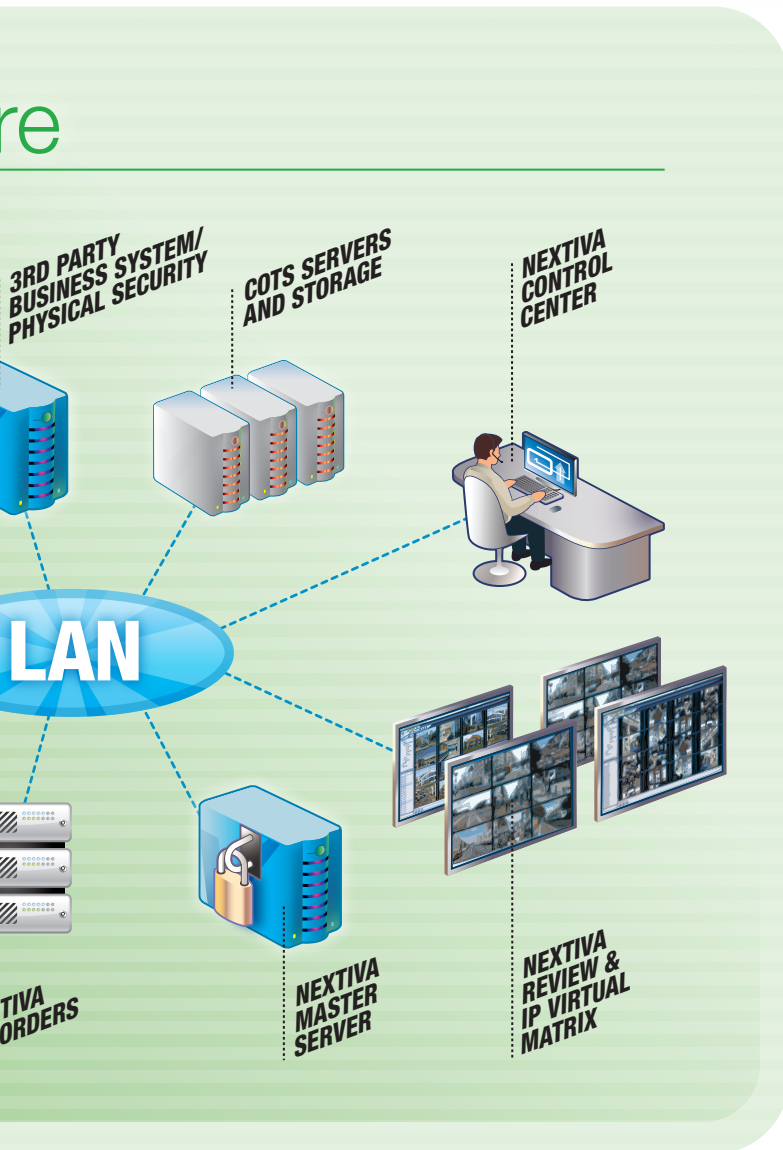

Nextiva Architecture

Versatile Access with Nextiva Web Review™

Nextiva Web Review allows remote investigators and first responders fast and simple web browser access to Nextiva VMS. Web Review offers a rich feature subset and the same look and feel as the full Review client, in a small (2.7MB) footprint for quick access even over 56k bandwidth connections. The "Zero-Install" requirement also simplifies deployment and upgrading of large, distributed user bases.

What Software do for Your Organization?

Event Manager. Make Actionable Intelligence® a reality by allowing administrators to configure single or multiple automated responses to an array of system events. Wizard-assistance allows authorized personnel to customize operations to accommodate business rules for local and remote sites. Events can be triggered by analytics rules violations, motion detection, state changes on IP camera/device inputs, camera tampering, Nextiva HealthCheck™, access control, and custom SDK integrations.

Investigation Management. When a security incident occurs, security staff can leverage powerful investigation management tools to analyze what really happened, collect the information required to substantiate their findings, and record and safeguard their case files for evidentiary purposes. The Nextiva Investigation Management tool allows you to collect case-related audio, video, data, and other documents in case binders. Case Binders can be exported in a portable format requiring only a simple Web Browser for viewing all content.

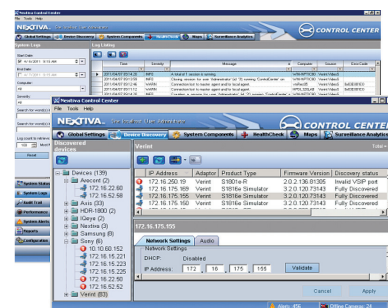

Real-time System Health Monitoring. Nextiva HealthCheck™ has essential tools that ease system administration and make managing your security solution both time and cost effective:

- ✓ Integrated IP device configuration and management, including firmware updates (both Verint and third party devices)
- ✓ System alerts, logs, and audit trail, with querying, filtering, and reporting
- ✓ System operation and performance monitoring and alerting

Get a Global View with Nextiva Multisite. When your operations span cities, countries, or even continents, simultaneously monitor any or all of your Nextiva VMS sites from a single Nextiva Review session. Sites can still operate autonomously, allowing centralized, collaborative, or mixed operation. View and share live or recorded video and alarms across sites, and investigate events from any site. Built-in resiliency allows continued multi-site operation despite any failures at individual sites.

Effective Video Routing with Nextiva Virtual Matrix.

Cross-site network-based distribution of live and recorded video, audio, and alarms to video walls, analog monitors and HD monitors across dispersed locations and Command, Control and Communications (C3) environments.

Easy System Administration through a Central Console. Nextiva's system configuration and administration functionalities are centralized in a single application, Nextiva Control Center. A modern, intuitive UI and helpful wizards assist with configuring and managing every facet of your Nextiva system. From Automatic Device Discovery and Control to Recording Schedules and User Rights Management, all the way to System Health Monitoring.

Why Nextiva?

Verint Nextiva Video Management software promotes a more proactive, effective approach to security and emergency management. This software solution helps organizations of virtually any size and scope address a wide array of strategic video security challenges including:

- ✓ How to manage large, geographically-distributed video operations more efficiently and cost effectively and how to make the most of limited security and loss prevention staff.
- ✓ How to find the most important information in the huge volumes of video and data that organizations collect.

- ✓ How to detect threats more quickly and accurately, expedite communications when emergencies occur, and ensure that the appropriate people and agencies are notified.
- ✓ How to improve video security system uptime, streamline maintenance, and reduce costs of ownership and operation.

Nextiva is United States DHS Certified

Nextiva has been certified by the United States Department of Homeland Security (DHS) as an anti-terrorism technology. Nextiva received this certification after meeting the qualifications outlined in the 2002 Support Anti-Terrorism by Fostering Effective Technologies Act (SAFETY Act) and remains one of only a few to have successfully obtained to date.

VERINT®

Powering Actionable Intelligence.®

Verint® Systems Inc. (NASDAQ: VRNT) is a global leader in Actionable Intelligence® solutions and value-added services. More than 10,000 organizations in over 150 countries use our workforce optimization and security intelligence solutions to improve enterprise performance and make the world a safer place.
