

# IPMP - IP Management Platform

## Complete Solution for Managing IP Services

The Internet is changing the security industry. Instead of traditional telephone lines, more and more security service providers are relying on IP technology for transmitting alarm notification data between security systems and the central station. Chosen for its reliability and cost effectiveness as an event delivery method, IP technology opens new opportunities for numerous value-added services. These include video alarm verification, end-user event messaging, and web-based security and surveillance.

Visonic's IPMP is a unique IP service management platform that enables alarm central stations and other security service providers to get maximum benefit from using IP technology for security.

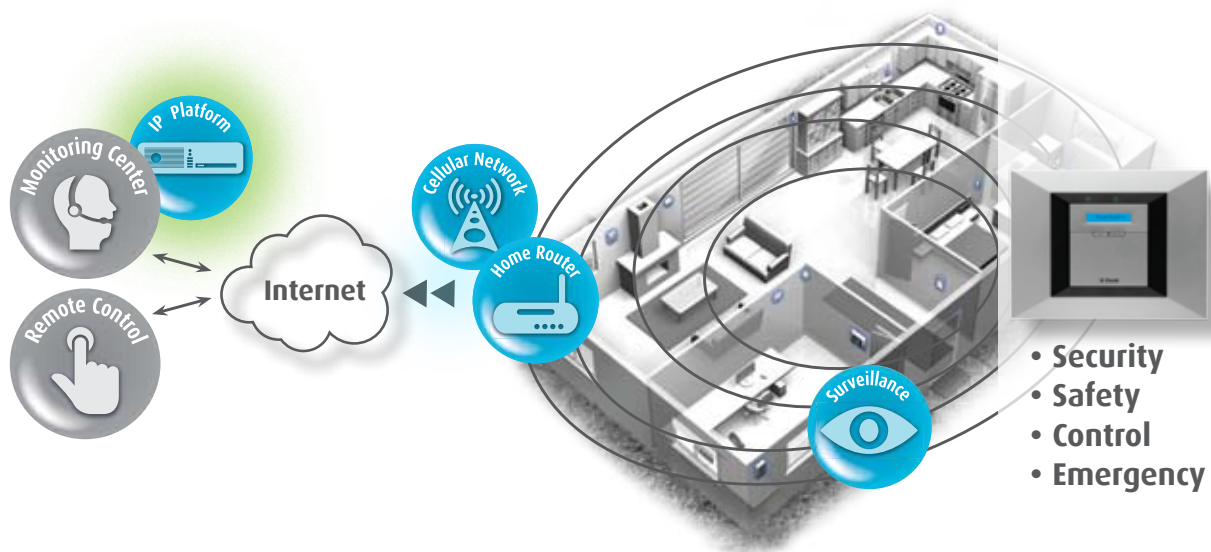

- Central station IP receiver
- Supports both broadband and GPRS communicators
- Manages up to 20,000 accounts per server
- Central station video alarm verification receiver
- End user message dispatcher - email, SMS, MMS
- Web services management for PowerLink

# Establish and grow your Internet-based security offering

## All-in-one receiver for all Visonic IP-based modules

- Serves as the IP receiver for all Visonic broadband and GPRS modules, including PowerLink
- Forwards all events to the central station software using a standard protocol
- Supervises each connected unit at selected frequencies
- When connected to PowerLink, a video alarm verification interface enables the central station operator to quickly track an alarmed system and view the alarm time recorded images

## End-user message dispatcher

- Built-in message dispatcher application meets consumers' growing expectations for constant connection to services
- Enables service providers to forward event notifications and alarm time recorded images to selected customers via email, SMS and/or MMS

## Full grade service management platform for PowerLink

- Controls each PowerLink account separately, offering the following capabilities:
- Account and service management
- Billing reports
- Event handling
- Advertisement management
- End-user message handling

## Additional features & capabilities

- Easily handles up to 20,000 accounts per server based on a 2-minute line supervision
- Enables remote GPRS-based programming of systems
- Enables remote firmware upgrade of PowerLink modules
- Maintains a history of 256 events per system, including alarm time recorded images for video alarm verification
- Serves as a dynamic DNS server providing fixed access addresses to the PowerLink web service customers
- Complete software and fully redundant hardware package
- Optional full cluster configuration
