

- Program 6 phone numbers and record 4 messages; system automatically calls the number and relays the message appropriate to the emergency
- Access the system remotely with your unique PIN code by telephone; listen in to your home, talk to occupants, and set or unset the alarm
- 433 Mhz wirefree communication minimises interference from other radio signals
- The system can be part set at night to allow movement upstairs
- Up to 20 different wirefree accessories can be connected allowing you to expand your system
- Batteries last up to 2 years; low battery warning; control unit protected from mains failure for 8 hours with back-up battery
- Weatherproof siren with 104 dBA sound output and built-in strobe light
- Change the entry and exit time delay to suit your needs
- System is triggered if it is vandalised or tampered with
- Microphone and speaker built-in to the control panel for hands free communication

main features

Example installations

Two bedroom house

- The Yale HSA3500 alarm kit

Three bedroom house

- The Yale HSA3500 alarm kit
- Plus additional 1 x PIR movement detector

Wirefree communicating alarm system

Communicate with your home

It's the new approach to personal home security. The stylish control panel has a microphone and speaker

built-in and is connected to your telephone line. The system will call up to six telephone numbers (for example, yourself, a relative, a friend or a neighbour) with one of four messages you record. These can advise the nature of an alarm - fire, burglary, personal attack or medical emergency - enabling prompt and

appropriate action. Furthermore, you can listen-in, talk, and control the system from anywhere in the world - protected by your own PIN number.

Easy-to-install, easy-to-use

The HSA3500 is wirefree, only the control panel needs plugging into the mains (to keep its re-chargeable battery charged) and into your telephone system. The wirefree detectors are easily installed, there's no damage to home decor or carpets to lift. They use a high quality radio frequency to communicate with the control unit and clever electronics to reduce power consumption to give battery lives of up to 2 years. The control panel has an easy-to-use scrolling menu system, making the sophisticated detection and communication systems easy to program.

Easy to use by all the family, it'll protect everyone including children, the elderly and the infirm.

System includes: 1 x siren/strobe, 1 x control panel, 1 x PIR, 1 x door/window contact, all batteries and fixings, mains power adaptor, telephone lead and connector, 2 x warning window stickers, 6 x quick reference cards, instruction book and 1-year guarantee with optional extended cover.

The Yale service commitment For more than 150 years Yale has been the world leader in the development and manufacture of security products and systems to the highest standards. The Yale Wirefree communicating system is backed by a 12 month guarantee. Customers are offered advice on installation, **seven days a week**, from fully trained personnel.
