

Industry solution for Healthcare

**Improve healthcare  
security and patient care**

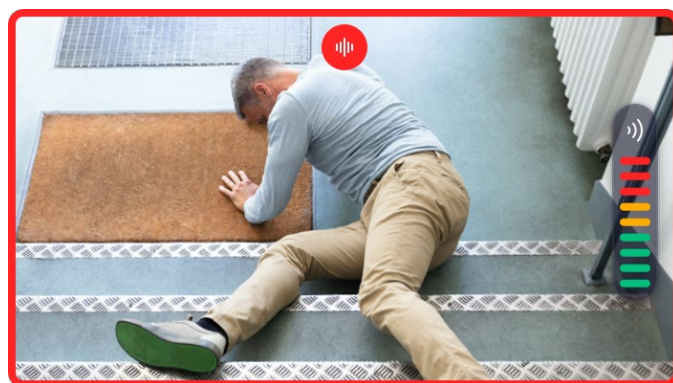

Today's medical institutions have a large number of patients who require constant supervision, risk malpractice and patient negligence claims, need to ensure hygiene compliance, and find solutions for the high security and video storage costs. When faced with high administrative costs, government funding, or recession, intelligent video security solutions can help hospitals relieve the pressure. Choose Ava to reduce liability claims, detect threats proactively, improve operational efficiency, and provide surgery documentation for educational purposes.

## Why Ava?

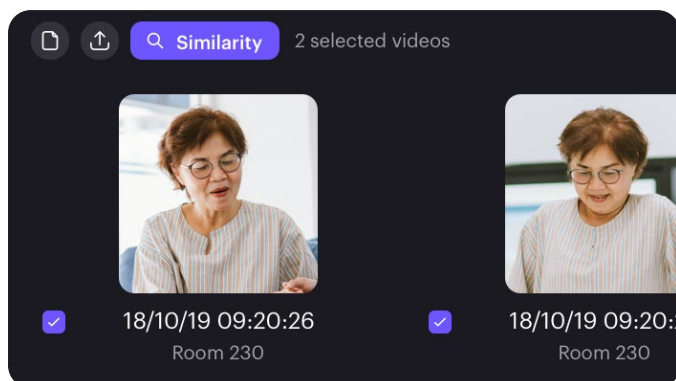

### Anomaly detection and analysis in real-time

The integrated video analytics in the Ava solution use self-learning to give operators and enhanced understanding of all the camera feeds. The dynamic Video view brings only relevant feeds to the operators' attention. Security and healthcare professionals are instantly alerted when high-risk patients leave their rooms unattended or visitors are wandering in prohibited areas.

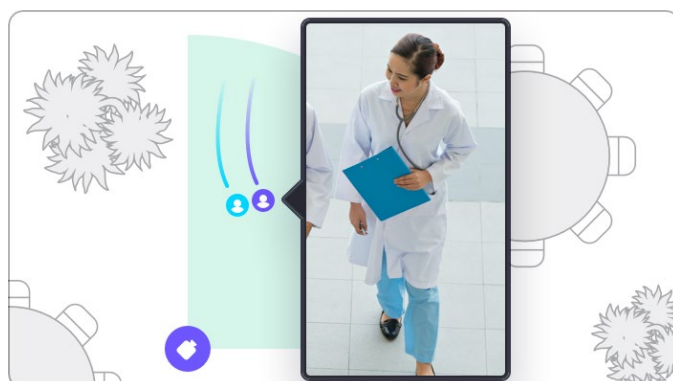

### Integrated directional audio analytics

Equipped with directional acoustic sensors, Ava Dome and 360 notify security and healthcare professionals instantly when loud noises, screaming, glass breaking, and gunshots occur. The cameras deliver unmatched video quality required to provide recordings for scientific presentations, research, and education. Our cameras are suitable for different settings, from parking lots and storerooms to patient wards and operating rooms.

### Quick search within minutes for insurance claims

Operators can find visual evidence to prove or disprove liability claims fast and accurately or if hygiene protocol compliance is followed correctly. Smart Search™ allows personnel to search by appearance, events, objects, similarity, or image. Our Ava Aware VMS integrates with access control systems through the generic access control API. It is possible to get a clear picture of historical entries and exits of patients and staff and the video associated with it.

### Increased situational awareness

Add maps of your facilities and rooms to keep track of high-risk patients, visitors, and staff and their exact location. Maps include Smart Presence™, a capability that lets you track them as they move through your facilities. Combine with access control to locate patients and staff in critical moments. Administrators can also have a clear picture across their locations to improve patient care and daily operations.

# Key benefits, delivered

## Build from existing investment while retaining privacy

- Integrate with existing cameras
- Hundreds of hours saved in forensic searches
- Add access control to extend capabilities
- Video & metadata storage remain on-premises
- Full site survivability and local access

## Save storage and money

- Automatically decrease storage demands from all your recordings
- Reduce bandwidth consumption on critical links with AI-based optimization
- Pay for what you need, when you need it, without the hassle of complicated licensing
- Up to 200 cameras per Ava appliance—small footprint support for larger facilities

## Enhanced customer experience

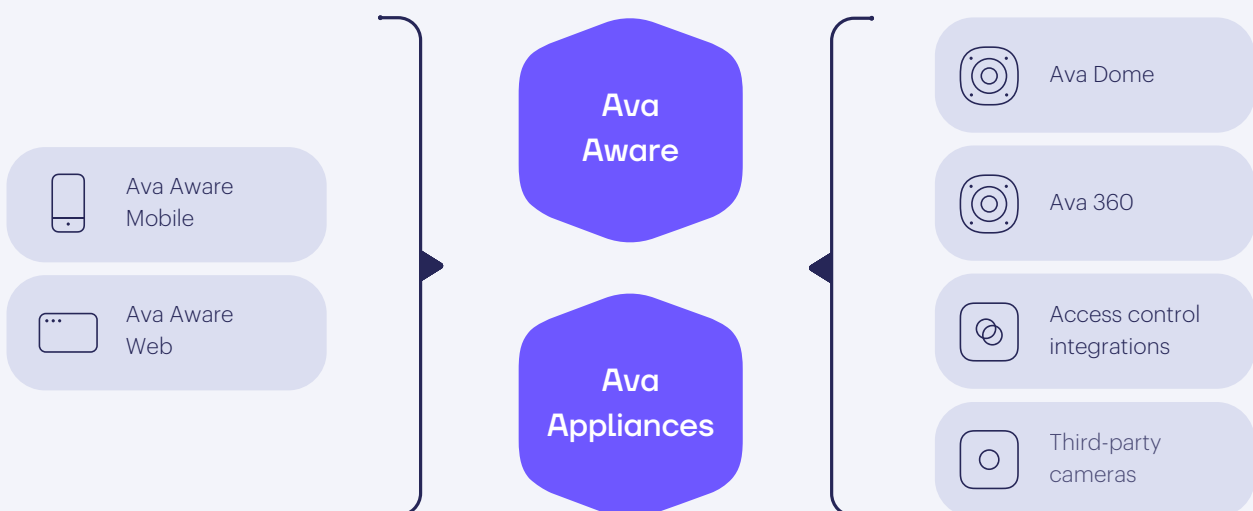

- Increase operational productivity and reduce facility costs
- Distribute heat and cooling efficiently, optimize cleaning and workplace productivity through hot-desking insights
- Use people flow insights to manage people and vehicle queues efficiently

## Collaborate securely and fast

- One-click Ava Dome and Ava 360 camera configuration
- Encrypted media at rest and in transit
- Automatic firmware updates
- Digital watermarking to prevent tampering
- Simple subscription model without hidden costs or analytics add-ons

## Your end-to-end security solution awaits

## Simple and flexible licensing

With a simple licensing model, Vaion always includes services and software upgrades. You no longer have to worry about integration charges, operator charges, API fees, or the complexity between small, medium, large, and enterprise services.

Ava exists because we believe that we can create a better, smarter way to deliver video security. We inject intelligence in our approach to security and all our products. We help organizations monitor, understand, and act on their surroundings to protect their people and assets in real-time.
