

Vanderbilt provides their SPC system to enhance access control system at the Maritime Culture Center

Vanderbilt provides SPC system to the Maritime Culture Center

Maritime Culture Center is a branch of the National Maritime Museum in Gdańsk, Poland. The Maritime Culture Center (MCC) promotes information on maritime subjects in a comprehensive and interactive way by employing multimedia techniques.

The main attraction of MCC is a permanent interactive room called 'People-Ships-Ports.' Another exhibition, 'Boats of People of the World,' is a rich collection of boats, varying from an Eskimo kayak to a Venetian gondola. The MCC also organises temporary exhibitions on popular maritime topics.

Embedded access control

The MCC needed an intrusion system with embedded access control for more than 400 alarm zones, 55 areas, and 25 doors. Vanderbilt SPC's offered a reliable system that can be expanded to include a large number of alarm zones.

Solutions Provided:

- SPC6300 with 38 input expanders (SPCE652).
- 18 2 door expanders (SPCA210).
- 13 keypads (SPCK420).
- 5 RF-expanders (SPCW130).

*"Due to installing Vanderbilt's SPC system, the museum is safe. The system meets our expectations in the field of security. Thanks to their wireless equipment (receivers and detectors) we can protect the exhibits in the temporary exhibition. Vanderbilt turned out to be a very helpful company in installing and programming the security system in the building of the museum,"* said Michał Drobczyński of Maritime Culture Center.
