Wavelet Technology  
Integrity in digital recording

## Security Management Software Suite

The Wavestore EVIS software suite is an application framework to manage integrated security systems that use the Wavestore DVR with access control, building management and alarm management systems.

Its main objective is to provide a custom software solution for the end user which is totally flexible to meet all custom requests. This is achieved by the use of a modular system and an intuitive macro system.

- Seamless Integration
- Design Simplicity
- Total System Flexibility
- Low Level Programming
- Multiple Network Bridging
- Minimal Cost of Ownership

**EVIS** Introduces an open architecture to place all controls on a single platform and interface with a wide range of security systems, using a modular construction to provide the controls required for the application

### Seamless Integration

Designed to provide the operator with icon driven menus within an easily managed & responsive format.

### Design Simplicity

User friendly macro system (under password control) enables the powerful and flexible configuration, event logging and alert sequences to be changed easily.

### Total System Flexibility

True flexibility is provided to enable the installer or system administrator to access all elements for each specific installation.

### Intuitive Macro System

The macro system enables the configurations to be changed easily and quickly (subject to password only)

### Multiple Network Bridging

The interface can map beyond a Wavestore network to legacy or third party recording systems, in addition to the wide range of access control and alarm interfaces.

### Minimal Cost of Ownership

The installer or system administrator can quickly and easily change the configurations to support changing priorities for new or short-term requirements.

## EVIS Modules

### Device Drivers

Seamless integration of Wavestore recording & management system into other devices; ANPR, access control and alarm management products

### Viewer

Lists all available functionality and includes playback control, PTZ and quick find capability

### Sitemap

Allows creation of mapping GUI with devices displayed, zoom into areas, select cameras, control PTZ and the ability to create tours and presets

### Alarm Manager

Configuration for logging, alarm notification, actions on alarm, instant review of events and search

### Back Up

Allowing video back up as MPEG, AVI, burn to CD/DVD and archive to client hard drive

### Auditor

Allow tracking of users' activities and report generation. Tracks such actions as: cameras switched, clips backed-up, PTZ operation and log-in details

### Web Manager

HTTP server delivering information to device, downloading video archive over web, snapshot and text messaging from device to operators

### Mobile Manager

Support for the use of hand-held devices such as PDAs and mobile phones. Allows alarm alert with video view, camera selection and site map functionality. See Wave Ranger product sheet for more details.
