

DEEPER INTELLIGENCE.
DEEPER SURVEILLANCE.
HIKVISION DEEP LEARNING SOLUTION

DEEP LEARNING TECHNOLOGY

In this ever-expanding era of Surveillance Data Technology (SDT), deep intelligence will become the foundation for the security industry. Technologies that “learn” will become more common and more powerful. This trend will strengthen critical security efforts in every sphere. Now, Hikvision’s DeepinView Cameras and DeepinMind NVRs will lead the way in this new world of surveillance technology by making invisible intelligence visible for users, and then putting that intelligence to good use.

ADVANTAGES OF DEEP LEARNING

1. Traditional Intelligent Algorithm

The number of video surveillance devices and the sheer amount of data are both rapidly increasing in their own right, while the traditional intelligent algorithm continues to operate only on the surface level. Current systems suffer from:

2. From "Shallow" to "Deep"

The algorithmic model for deep learning has a much deeper structure than the two 3-layered structures of traditional algorithms. In deep learning, an original signal passes through layers of processing; next, it takes a partial understanding (shallow) to an overall abstraction (deep) where it can perceive an object.

3. From "Artificial Features" to "Feature Learning"

Deep learning does not require manual intervention but relies on a computer to extract features by itself. The more features there are, the more accurate the recognition and classifications will be.

KEY FACTORS OF DEEP LEARNING

The rapid development of GPUs, supercomputers, cloud computing, and other high performance hardware platforms has made deep learning possible.

User experience has improved and more users are involved, facilitating a larger scale of data. With such a large amount of quality training data, object pattern recognition models will become more accurate for video surveillance use.

Through the constant optimization of deep learning algorithms, better target-object recognition is continually being achieved.

KEY FEATURES OF DEEP LEARNING

Facial Detection is only the beginning for Deep Learning features. With analytics that take business solutions into the next century, and with automatic alarm accuracy above 90%, this technology is a step above and beyond anything video surveillance as you know it. Hikvision's Deep Learning technology filters out insignificant objects and movements in a scene that would trigger normal alarm systems.

Vehicle data gets recorded and shapes the database to perform numerous security functions. People Counting systems give businesses an advantage in marketing and conversion efforts. Hikvision's solutions add value on multiple levels.

95%

Similar

1. Facial Detection

Facial Detection software will analyse images and determine the presence of a human face. When a face is detected, the system captures its position, size, and expression. The video stream will judge whether there is a human face. If so, the position, size, and main features will be recorded. Identifying characteristics can be obtained from this information. When compared against recorded human faces in a database, a face can be identified. Facial comparison is the process by which structured data information operates after data modeling and analysis for the human face.

95% Similar

2. False Alarm Filter

The False Alarm Filter enables the system to perform secondary recognition for human body targets in behavioral detection events (line crossing detection, intrusion detection), effectively reducing the false alarms caused by shaking leaves, shadows, light variations, vehicles, small animals, etc.

3. People Counting

The People Counting function counts people entering, exiting and passing by a specific scene, such as in a supermarket or museum where large crowds move through on foot.

Good Anti-Interference Ability

Height Filtering

Loitering Filtering

4. Vehicle Structured Data

Vehicle Structured Data refers to a bivariate table formed by extracting the vehicle information, like licence plate number, vehicle color, model, brand, sub-brand, etc., and is used for vehicle information retrieval.

5. Human Body Search

The search by human body picture feature enables the system to use a provided human body picture to find matching images and information in recorded footage.

APPLICATIONS SELECTED PRODUCTS

Customer Behaviour

- People Counting: Identify peak hours and days and assign staff accordingly. Use together with POS data to calculate conversion rates.
- Dual-Lens People Counting Camera iDS-2CD6810F/C

Loss Prevention

- Facial Recognition: Loss prevention managers can be notified when a suspected "habitual thief" visits. His or her face can be shared across all chain stores.
- Dual-lens facial recognition iDS-2CD8426G0/F

Intrusion Alarms

- Accurate human body detection: Deep Learning technology dramatically increases the accuracy of intrusion, it eliminates the influences from animal, shaking leaves and etc.
- DeepinView Primeter detection cameras DS-2CD7X26G0

RETAIL

Brick-and-mortar retailers need to better understand their customers' behaviors to boost competitiveness against online competitors. And loss prevention plays an important role in boosting profits. Deep Learning technology helps users accomplish these tasks – and much more – providing advanced analytics and video surveillance.

Residential buildings, industrial plants, stadiums – there are many types of structures, but security is the one thing that each one requires. Access control and perimeter protection are the most common requirements. Deep Learning technology establishes more accurate intrusion alarms and more convenient access control.

BUILDING

Human Body Detection and Analysis

- Hikvision's DeepInmind Series NVRs are the first embedded NVR based on a deep learning algorithm executed by its GPU, making it faster and more accurate than conventional CPUs. This NVR effectively filters out alarms triggered by animals and inanimate objects, with greater than 90% accuracy.
- Deep learning has come to the security industry in this amazing video recording unit iDS-9632NXI-I8/8S(/16S), iDS-7716(32)NXI-I4(/16P)/8S

Intrusion Alarms

- Accurate human body detection: the Deep Learning technology dramatically increases the accuracy of intrusion and eliminates the influences from animal, shaking leaves and etc.
- DeepinView Perimeter detection cameras DS-2CD7X2660

Facial Recognition

- Control building access using facial recognition cameras and get alarmed of suspicious visitors.
- Facial recognition technology helps to eliminate buddy clocking and timesheet abuse.

SMART CITIES

Effective protection of citizens, their property and public areas, is a concern for city authorities around the world. In Safe City Project, Hikvision's Deep Learning technology is adopted to identify specific personnels and analyze human and vehicle behaviors. This can be used for locating a fugitive at large, finding lost people, preventing potential crimes, detecting parking violations, etc.

iDS-96064NXI-I16
DeepinMind 16-ch Facial Recognition &
Analysis Embedded NVR

DeepinMind

- Up to 16-ch IP cameras analysis, face detection and face recognition.Face pictures modeling and comparison, alarm linkage actions.Search People by face pictures
- Powerful face pictures library management, up to 100,000 Face list
- Cooperation with iVMS-4200
- Human Body Detection analytics (line crossing detection, intrusion detection, etc.) to improve the alarm accuracy rate effectively
- Like the Rain/Leaf/Cat/Bird/Light/Human Body, All of these things may trigger line crossing or instruction alarm,DeepinMind NVR(16S) can realize the secondary analysis of human body, improving the alarm accuracy
- Search by human features and similarity
- More precise facial recognition and analytics based on Deep Learning algorithm
- More precise Human body detection. Analytics based on Deep Learning algorithm
- Alarm accuracy at least 90%. (After processing by DeepinMind NVR(/S), the false alarms would be Filtered)

Scenario

- Applied to all kinds of smalls and medium-sized faces project, can meet the demand of various industries face application
- Such as casino/residential buildings/schoolyard/mall

iDS-96128NXI-I16
DeepinMind 32-ch Facial Recognition
Embedded NVR

DeepinMind

- Up to 32-ch IP cameras analysis, face Detection and face Recognition.Face pictures modeling and comparison, alarm linkage actions.Search People by face pictures
- Powerful face pictures library management, up to 100,000 Face list
- Cooperation with iVMS-4200
- Human Body Detection analytics (line crossing detection, intrusion detection, etc.) to improve the alarm accuracy rate effectively
- Like the Rain/Leaf/Cat/Bird/Light/Human Body, All of these things may trigger line crossing or instruction alarm,DeepinMind NVR(16S) can realize the secondary analysis of human body, improving the alarm accuracy
- Search by human features and similarity
- More precise facial recognition and analytics based on Deep Learning algorithm
- More precise Human body detection. Analytics based on Deep Learning algorithm
- Alarm accuracy at least 90%. (After processing by DeepinMind NVR(/S), the false alarms would be Filtered)

Scenario

- Applied to all kinds of smalls and medium-sized faces project, can meet the demand of various industries face application.
- Such as casino/residential buildings/schoolyard/mall

DS-9632NXI-I8/8S(16S)
DeepinMind 8/16-ch Human Detection
& Analysis Embedded NVR

DeepinMind

- High accuracy human body detection analysis (line crossing detection, intrusion detection); up to 8/16 channels of IP camera analysis available
- DeepinMind NVRs (16S) runs a secondary analysis and filters out objects that may trigger false alarms such as rains, leaves, cats, birds, and light variations
- More precise human body detection based on Deep Learning algorithm
- Alarm accuracy at 90%+

Scenario

- Applies to any scenario that requires high alarm accuracy for perimeter precaution, such as casinos, office buildings, industry parks, hotels, and banks

iDS-9632NXI-I8/4F
DeepinMind 4-ch Facial Recognition
Embedded NVR

DeepinMind

- Up to 4 channels of IP cameras analysis, face detection and facial recognition. Facial image modeling and comparison, alarm linkage actions. Search for persons by facial images
- Powerful facial image library management; stores up to 50,000 faces
- Integrates with iVMS-4200
- More precise facial recognition and analysis based on Deep Learning algorithm

Scenario

- Applies to all-size facial recognition projects and all industries, such as casinos, residence, schools, and shopping malls

iDS-7716/32NXI-I4/(16P)8S
DeepinMind 8-ch Human Detection & Analysis Embedded NVR

DeepinMind

- Human Body Detection analytics (line crossing detection, intrusion detection, etc.) to improve the alarm accuracy rate effectively. Up to 8-ch IP cameras analysis
- Like the Rain/Leaf/Cat/Bird/Light/Human Body, All of these things may trigger line crossing or instruction alarm, DeepinMind NVR(8S) can realize the secondary analysis of human body, improving the alarm accuracy
- Search by human features and similarity
- More precise Human body detection. Analytics based on Deep Learning algorithm
- Alarm accuracy at least 90%. (After processing by DeepinMind NVR(/S), the false alarms would be Filtered)

Scenario

- All kinds of scenarios (for example: perimeter precaution) that require high alarm accuracy, such as casino/building/industry park/hotel/bank

iDS-TP40-16B
DeepinMind Server
Traffic Incident Detection Server

DeepinMind

- Up to 16 channels of 3 MP IP cameras for traffic incident detection and traffic data collection.
- Traffic incident detection type: congestion, parking violation, driving on a lane line, wrong-way driving, pedestrians, falling objects, illegal lane change, roadblocks, construction, occupying the emergency lane.
- Traffic data collection: vehicle type, lane flow, average speed, space headway, time headway, time occupancy, space occupancy, lane queue length, lane traffic status

Scenario

- Expressways/tunnels/elevated roads/bridges

DS-IE6308/16/32/64-E/FA
DeepinMind Facial Recognition Server

DeepinMind

- Supports for up to 16 MP uploaded images for comparison
- Supports for up to 8 MP camera for real-time computing and comparison
- 1-to-1 facial comparison for identity confirmation
- Blacklist alarm supports 300K blacklist targets
- Stores 1 million captured images
- Facial recognition and blacklist comparison, identity confirmation, blacklist alarm, independent working mode support

Scenario

- Airport/customs/public squares/government offices

DS-IC0116-F
DeepinMind Facial Recognition Server

DeepinMind

Coming Soon

- Supports for up to 16 MP uploaded images for comparison
- Supports for up to 8 MP camera for real-time computing and comparison
- Blacklist alarm supports 300K blacklist targets
- Supports server clustering for large-scale projects; provides more facial recognition applications via integration with Hikvision VMS platform
- Facial recognition and comparison blacklist, identity confirmation, blacklist alarm

Scenario

- Airport/customs/public squares/government offices
