

Maxxess InSite Awareness and Response Coordination System makes U.S. debut at ISC West 2019

Published on 10 Apr 2019

Maxxess Systems, the innovator in security solutions that empower total situational awareness for security enterprises, is debuting the company's Maxxess InSite Awareness and Response Coordination System to the American market here at ISC West 2019 (booth #6065). Maxxess InSite uniquely combines security, communications, business intelligence and data integration on a single, easy-to-use platform.

"Maxxess InSite empowers total awareness by providing users with unprecedented capabilities far beyond basic system management and incident detection to help prevent incidents from happening,

” said Nancy Islas, President of Maxxess Systems.

Maxxess InSite enables early incident detection and action, allowing users to correlate data, improve response coordination

“A new benchmark for security and business intelligence software platforms by every standard of measure, Maxxess InSite coordinates the activities of first responders and the people they are assisting from the moment a threatening event is detected with unprecedented simplicity of operation.”

Early incident detection and action

Maxxess InSite Awareness and Response Coordination System combines ‘system intelligence’ and ‘human intelligence’ to detect and respond to unfolding events in real-time – all of which are queued, organised and displayed on a highly-intuitive user interface.

Maxxess InSite enables early incident detection and action, allowing users to correlate data, improve response coordination, and deal with issues when they’re small – before they become large and costly. Maxxess Insite harnesses the power of myriad system technologies, effectively expanding their collective capabilities while also making human interaction more intuitive.

Combines technologies onto a unified platform

It meshes the capabilities of virtually any system and technology onto a unified platform

It meshes the capabilities of virtually any system and technology onto a unified platform including: video surveillance; access control; two-way communications; GPS/IPS location technologies; intrusion detection; fire safety systems; perimeter detection/protection; HVAC/building management; smart phones and tablets; ID/credential badging; guard tour; visitor management; time and attendance; license plate recognition; panic device/hotkey emergency notification; reporting/forensics; wireless sensors; elevator/escalator control and database integration.

Over 50 different manufacturers are already integrated with Maxxess InSite, providing more capabilities and functionality than any other cross-platform solution available.

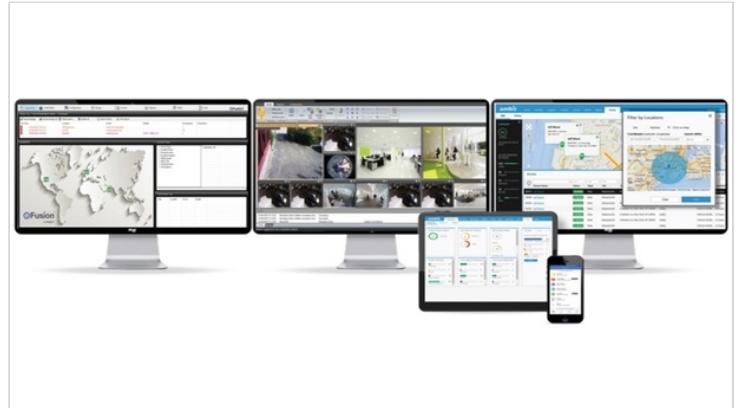

New integrations include: Mercury LP and MR62e controllers; OTIS Elevator Compass Overwatch; enhanced Milestone Systems' MIP and Geutebruck GeViScope integrations; as well as new integrations with Salient Systems, Avigilon, ISS (Intelligent Security Systems), Nedap and RemotePoint.
