

## Nortech to showcase Norpass access control solution and Nedap ANPR at Elevate 2019

*Published on 22 Apr 2019*

People and vehicle access control specialist Nortech will be exhibiting at Elevate 2019, the meeting place for UK's growing physical activity sectors at London's ExCel on the 8-9 May to introduce its innovative products to the market.

2019 is Nortech's first time at the show and they will be demonstrating the flexibility of the Norpass access control solution, which provides a wide range of features that are ideally suited to the leisure sector.

**Access control sector**

With Norpass, access control can be provided at all access points to gyms, fitness studios, health clubs and more to ensure that only authorised members and staff can enter the premises. Nortech recommends the use of its Mifare readers and smartcards that have a dedicated secure access control sector.

“ Norpass3, the licence free software at the heart of the access control system, can run on any standard specification PC

The benefits of using smartcards with a dedicated access control sector is greatly improved security plus the ability to issue sequentially numbered cards to members, facilitating easier card management. In addition, the same cards can be used for other Mifare enabled facilities such as vending machines and fitness management systems. Norpass3, the licence free software at the heart of the access control system, can run on any standard specification PC (Windows 7 onwards) and is quick and easy to set up using the built-in setup wizard.

## Time limited access

It includes many features that are ideal for leisure centre membership access control including -

▮ **Picture Pop-up** - This enables staff to monitor people entering through a turnstile to ensure that the person entering is the valid cardholder. When an ID card is presented to the reader, the cardholder's photo automatically appears on the screen of the operator/administration terminal.

▮ **Time Limited Access** - A feature that automatically enforces time limited access to certain areas (for example where a member is allowed the use of the facility for a fixed number of hours each week). Once a member has used up their weekly allocated time, they will not be allowed access until the start of the next week or until a staff member has granted an extension.

**Count Groups and Reporting** - This feature can be used to ensure that the number of members of a particular category present within a restricted area does not exceed a preassigned limit (e.g. for health and safety reasons), and to make sure that the appropriate level of supervision is available. Whenever the numbers exceed the limit, an alarm will be raised to alert staff to take action.

**Automatic Digital Video Recorder Activation** - Individual ID cards can be registered on the system so their use can be monitored in real time. For example, if a card has been reported as lost or stolen, its record can be set to automatically activate a video recording of the person using that card when it is used to gain access through a certain turnstile.

## Vehicle access management

Nortech will also be demonstrating the Nedap ANPR (Automatic Number Plate Recognition) solution for vehicle access management. The ANPR is fully compatible with Norpass so that it can provide a fully integrated vehicle access management system for staff and members. Nortech has supplied products and solutions to the security industry for over 25 years as an independent British company.

The company uses extensive experience and expertise to create new security products to fit their clients' needs and designs everything with the customer in mind. Visit Nortech at Elevate 2019 on 8-9 May at London's ExCel to find out more about the many systems available and how they can benefit the future of people and vehicle control solutions.
