

Pyronix Enforcer 64 featuring V12.5 firmware

Technical Specification

Make	Pyronix	
Company	Pyronix Limited	
Model code	Enforcer 64	
Control Panels & Accessories	Yes	
Wireless	Yes	
Max No of RKPs	4	
Tamper	Yes	
No of User Codes	75	
Keypad Operated	Yes	

Physical Specifications	Dimensions mm: 220 x 160 x 50
Environmental Specifications	Operating Temp °C: -10 ~ +40 C (14 ~ 104 F)
Additional info	<ul style="list-style-type: none">┆ The proven Pyronix Enforcer is upgraded with a new modern design and V12 firmware.┆ Boasting award-winning two-way wireless technology, the Enforcer 64's V12 firmware makes it expandable to 64 wireless inputs to satisfy all your installation needs.┆ Compatible with ProControl+ for video integration, the system is completely controllable anytime from anywhere, making it ideal for residential and business properties.

Product profile

Pyronix, the intrusion specialist of the world-leading Hikvision group, is delighted to announce the launch of the Enforcer 64 total wireless security solution.

Taking residential security to a new level, the Enforcer 64 is as quick-to-fit, easy-to-use and reliable as ever before, but features a new modern design and V12.5 firmware for Hik-Connect compatibility and dual path communication capability.

"We are absolutely committed to driving market applications towards total solutions, with the upmost attention for innovation and quality," Laurence Kenny, Pyronix Marketing Manager, comments.

He continues: *“With the Enforcer 64 we have delivered this in abundance with a complete solution that fuses security, video and lifestyle enhancements, with greater communication contingency and reassurance.”*

Pyronix first introduced the Enforcer wireless control panel in 2012. Since then it has consistently won multiple coveted industry awards, due to the company’s commitment to continuous improvement and innovative technological advancements by its dedicated R&D team.

These developments have culminated in the Enforcer 64, which comes with heightened capabilities to enable security and monitoring in one solution.

The Enforcer 64 utilises Pyronix award-winning two-way wireless technology, which is now expandable to 64 wireless inputs thanks to V12.5 firmware; double the number of the previous Enforcer solution. This makes adding wireless outdoor XD detectors, indoor KX detectors, sounders, keypads or safety devices easy, to suit any installation preference, without having to compromise.

“The Pyronix Enforcer is our premier wireless solution for professional security installers and integrators, utilising the award-winning features it is renowned for within the security industry as the foundation for further development,” Laurence comments.

He continues: *“We have further developed it to be expandable to 64 wireless inputs, delivering greater installation capability whilst fusing it with Hikvision’s extensive range of video equipment, iVMS via Hik-Connect for seamless functionality; all of which combine to provide a total solution.”*

The panel is certified to Grade 2 and perfectly suited for residential and small to medium sized commercial applications. It also delivers for multiple installation preferences, with complete compatibility with the whole range of communication modules. The solution also boasts hybrid capabilities, with the ability to add any of the complete range of wireless and wired peripherals, alongside the ability to add up to 30 automation outputs.

The Enforcer 64 fuses intrusion and video to bring together intrusion and video on one platform for enhanced customer value and upsell opportunities.
